By Bernie Horn and Gloria Totten

The Public Leadership Institute is a nonprofit, nonpartisan policy and leadership center that supports elected officials and advocates working on issues that affect all Americans, including health care, education, reproductive rights, and economic opportunity. Based in Washington, DC, the Public Leadership Institute provides model legislation, strategic messaging guidance, leadership training, and policy playbooks to help state and local policymakers advance proactive, values-driven solutions in their communities. We encourage you to contact our team for strategic guidance and support as you consider the policies outlined in this book.

Introduction

Across the United States, a vast network of Unregulated Pregnancy Clinics (UPCs), commonly referred to as crisis pregnancy centers, many of which present themselves as full-service reproductive health centers, are part of a broader movement to control and limit access to evidence-based reproductive care. While their mission is to prevent abortion, they also block access to contraception, promote fringe and medically inaccurate claims, and erode trust in the health care system. Despite their clinical appearance, and even in states where some are licensed, UPCs operate without medical oversight or accountability.

UPCs typically operate without financial transparency, despite receiving millions in taxpayer funding and investigations revealing misuse of taxpayer dollars by UPCs in multiple states.¹ UPCs routinely violate fundamental ethical standards² and vigorously resist requirements that they operate under established standards of transparency and care.³ UPCs collect private health information and claim to protect client confidentiality, but are not subject to the professional and legal obligations to protect individual privacy that govern regulated medical offices.^{4, 5} UPC clients are thus led to believe their private health information is protected, while being exposed to privacy breaches and possible criminal prosecution. Many UPCs promote misleading medical claims without adhering to established standards of care⁶ and face little accountability for their operations or outcomes.

This is a policy playbook for addressing these systemic failures. It offers sensible legislative solutions and strategic tools to address UPC's core failings: lack of health and safety standards, scant financial transparency and accountability, absence of data privacy protections, and deceptive practices. Grounded in research and developed with expert input, the playbook includes model bills, talking points, and messaging strategies that you can tailor to various state and local policy, political, and legal contexts. The models in this book can also be tailored to different policy opportunities, such as stand-alone legislation, amendments, resolutions, executive actions, community petitions, and more.

Whether you are working to ensure responsible oversight or to strengthen longstanding safeguards, this playbook offers tools to help you ensure transparency, fairness, and safety for all individuals seeking evidence-based health care in your community.

We welcome your partnership. If you have any questions about the model bills, need support tailoring policy to your state or locality, or want help shaping your strategy, please contact us at info@upcplaybook.org. We value your leadership and are always excited to support your efforts.

With appreciation,

Gloria A. Totten

Senior Director for Policy and Communications

Understanding Unregulated Pregnancy Clinics

Unregulated Pregnancy Clinics (UPCs)—also known as crisis pregnancy centers, anti-abortion centers, fake clinics, pregnancy health centers, or limited-service pregnancy centers—are organizations that frequently pose as health care clinics, but primarily work to deter people from accessing abortion, contraception, and other evidence-based reproductive health care. While many offer pregnancy-related services, such as pregnancy tests and non-diagnostic ultrasounds, the vast majority of UPCs are not classified as medical practices and do not charge for their services, so they are exempt from the regulations, including consumer privacy protections, that govern medical clinics and medical practices.

History and Scope

UPCs emerged as part of a larger anti-abortion strategy in the United States after the *Roe v. Wade* Supreme Court ruling that legalized abortion in 1973.⁷ Since then, their numbers have grown significantly. Today, there are more than 2,600 UPCs across the country,⁸ vastly outnumbering an estimated 765 clinics that provide abortions.⁹ Although UPCs often advertise “all-options” counseling, their primary goal is to obstruct access to abortion.

Tactics and Misrepresentation

UPCs often use misleading tactics to confuse people seeking or considering an abortion.¹⁰ They purchase targeted online ads¹¹ that pop up when people search for terms like “abortion provider” or “where to get an abortion.”¹² UPCs are often set up near clinics that provide abortion care. After the *Dobbs v. Jackson* decision, in states where abortion is banned, UPCs remain near clinics that no longer provide abortion, aiming to intercept people seeking birth control, all-options counseling, and other reproductive health services.¹³ The vast majority of UPCs operate without medical licensure and without medical oversight.¹⁴ In the few states where some of these centers hold Department of Public Health licenses, those licenses may not regulate clinical services. Once someone steps into a UPC, they’re frequently subject to biased counseling and medical disinformation—like the false claim that abortion raises the risk of infertility, breast cancer, or mental health issues.¹⁵

These tactics are not coincidental. A 2021 congressional report revealed that many UPCs are linked with national networks that provide training and communications strategies explicitly aimed at discouraging abortion.¹⁶

Public Funding and Lack of Accountability

Despite their clear ideological mission and provision of unregulated medical services without oversight, UPCs are securing increasing amounts of public funding, especially in states that restrict abortion. As of 2023, 22 states were using taxpayer money—often tens of millions annually—to fund UPCs through state-run “alternatives to abortion” programs.¹⁷ Texas alone allocated more than \$100 million in public funds to UPCs in the 2022-2023 fiscal year.¹⁸ Yet despite receiving public funding in nearly half the states, UPCs consistently resist fiscal transparency, accountability, and efforts to assess the impact of these public investments.¹⁹

Impact on Individuals and Public Health

Questions about the health impact of UPC practices are particularly concerning for young people, low-income communities, and people of color, who are already grappling with systemic barriers to reproductive and maternal health care.^{20,21} When someone searching for abortion seeks help at a UPC, they often experience intentional delays in accessing crucial medical care.²² These delays can push them beyond the legal gestational limit for abortion in their state, effectively cutting off their access to that care.²³

Moreover, while UPC advertising targets people seeking abortion, both the UPC industry and scholarly research show that the majority of people who visit a UPC intend to carry to term and visit the UPC seeking pregnancy care and material support.²⁴ The health consequences of UPC delay and disinformation tactics for pregnant people who visit a UPC before, or instead of, accessing prenatal care are unknown. But the relationship between delayed or denied prenatal care and maternal and infant mortality is well documented.²⁵

Furthermore, research indicates that those who visit UPCs are less likely to receive medically accurate information about their medical options.²⁶ Instead, they may be subject to coercion, judgment, or misinformation, which UPC staff often use to deter people from accessing abortion or contraception or seeking care from a provider of comprehensive reproductive health services.²⁷ These tactics not only undermine the principle of informed consent but also jeopardize public health standards and infringe on an individual’s right to make their own decisions about their reproductive health care.²⁸

Lack of Privacy Protection for Personal Information

In addition to collecting personally-identifiable information, UPCs also frequently collect extensive private health information from clients, such as date of last menstrual period, use of birth control, prescription and other drug use, past pregnancies and outcomes, and what options they are considering for their reproductive care.²⁹ UPCs are not legally obligated to

keep that information private or subject to any regulatory oversight of how they handle or use this data.³⁰ Thus they can share client data for any purpose, including with law enforcement to support pregnancy- and abortion-related prosecutions. An investigation by Privacy International found that Heartbeat International, a major UPC network, is building digital dossiers on UPC visitors.³¹

A Nationwide Unregulated Industry

UPCs are part of a large and widespread industry. They operate in all 50 states, and most affiliate with one or more of three national organizations: Care Net, Heartbeat International, or the National Institute of Family and Life Advocates (NIFLA). Based on the most recently available IRS 990 forms, about 2,100 pregnancy center locations reported more than \$1.9 billion in revenue and \$1.7 billion in expenses in 2023 alone.³²

Cloaked in the guise of legitimacy, UPCs divert public funds, spread false medical claims, exploit people's private health information, and deceptively brand themselves as a network of medical clinics—all in service of an ideological agenda.

UPCs are assuming a growing role in reproductive and maternal health care despite lacking the clinical oversight and accountability of regulated providers. As abortion is increasingly criminalized and maternal health systems suffer devastating cuts, UPCs are positioning themselves to fill critical care gaps that they are not regulated to manage. This reality demands regulatory action and a stronger safety net of trusted reproductive health services grounded in medical ethics and transparency.

Model Bills: Health and Safety Standards

1. Ultrasound Quality Assurance and Safety Act

Issue Overview

Unregulated Pregnancy Clinics (UPCs) often present themselves as free medical clinics to mislead clients seeking abortion. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.³³ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even, at times, as abortion providers.^{34,35} Inside, they often resemble medical offices, with waiting rooms and exam rooms outfitted with medical equipment and staff in lab coats and scrubs. Clients must often fill out intake forms that ask for extensive private health information.³⁶

According to recent studies, around three-quarters of UPCs offer ultrasounds.^{37,38} These are not diagnostic tests. UPCs offer ultrasound to emotionally influence clients to continue their pregnancy and to telegraph medical legitimacy.^{39,40} In states where ultrasound is required before abortion care, many UPCs falsely claim their services fulfill that legal requirement.⁴¹

The American Institute of Ultrasound in Medicine (AIUM) condemns using ultrasounds for any non-medical purpose. AIUM states, “The use of ultrasound without a medical indication to view the fetus, obtain images of the fetus, or identify the fetal external genitalia is inappropriate and contrary to responsible medical practice.”⁴²

Moreover, the operators of ultrasound machines at many UPCs do not meet the American Institute of Ultrasound in Medicine (AIUM) training guidelines. According to AIUM, proper diagnostic ultrasound exams must be conducted by, or under the direct supervision of, a physician, physician assistant, or nurse practitioner who has received specialized training.⁴³

Even Care Net, one of the largest UPC umbrella organizations in the U.S., acknowledges that performing ultrasounds outside of medical practice is unethical. Responding to, “Can we just do ultrasounds without becoming a medical clinic?” Care Net’s answer is unequivocal: “Absolutely not. The use of ultrasound energy in any form is considered the practice of medicine.”⁴⁴

Some states take ultrasound regulation more seriously for animals than for humans. For example, some states, including Georgia,⁴⁵ Minnesota,⁴⁶ Pennsylvania,⁴⁷ and Texas⁴⁸ prohibit unlicensed operators from conducting ultrasounds on livestock, defining it as the practice of veterinary medicine. Ironically, those same states currently allow unlicensed individuals to perform ultrasounds on pregnant people.

In addition to UPCs, for-profit “keepsake” photo businesses also perform non-medical ultrasounds to create souvenir images or videos. Unlike UPCs, these businesses are transparent and make no claim to offer medical services. Still, some states, including California and Washington, ban these companies due to health and safety concerns.

Ultrasound Quality Assurance and Safety Act

Summary: The Ultrasound Quality Assurance and Safety Act requires that an ultrasound device can only be used by a licensed medical professional operating within their scope of practice.

Based on [WA SB 6151 \(2024\)](#)

SECTION 1. SHORT TITLE

This Act shall be called the “Ultrasound Quality Assurance and Safety Act.”

SECTION 2. FINDINGS

The legislature finds that:

1. An ultrasound machine is a medical device that uses high-frequency sound waves to create images of the inside of the body.
2. The U.S. Food and Drug Administration, which is responsible for approving all prescription drugs and medical devices for human use, considers the use of ultrasound energy on humans to be the practice of medicine and must be done for clear medical indications and be performed by trained and licensed medical providers. The FDA opposes the use of ultrasound machines by anyone other than appropriately trained and licensed medical professionals, under the supervision and authority of a licensed physician.⁴⁹
3. The American Institute of Ultrasound in Medicine (AIUM) official statements⁵⁰ on the use and safety of ultrasound in pregnancy strongly discourage the use of ultrasounds for any non-medical purpose, advise that diagnostic ultrasound in pregnancy should only be performed when there is a valid medical indication, and recommend that all fetal ultrasound examinations be performed by appropriately trained and credentialed medical professionals who have received specialized training in fetal imaging and meet the AIUM training guidelines.⁵¹ The AIUM also emphasizes that all pregnancy ultrasound imaging requires proper documentation and a final report for the patient's medical record signed by a physician or an advanced clinical provider legally responsible for interpretation.⁵²
4. Nevertheless, ultrasound machines are being operated by untrained staff and volunteers in a number of circumstances. These include: “elective” standalone ultrasound “centers,” which may or may not have appropriately trained and supervised staff;⁵³ “keepsake” ultrasound photo studios to take pictures for framing;⁵⁴ and Unregulated Pregnancy Clinics (UPCs) [or use another name if it's common for your state] that often offer “non-diagnostic” ultrasound imaging.

5. It is therefore necessary and appropriate for state law to specify under what conditions an ultrasound can be performed.

SECTION 3. QUALITY ASSURANCE FOR ULTRASOUND

After section XXX, the following new section XXX shall be inserted:

(A) OPERATION OF ULTRASOUND LIMITED TO LICENSED PROFESSIONALS

1. An ultrasound or a similar medical imaging device or procedure may only be used on a person by:

(a) A health care provider holding an active license under (cite appropriate code sections) and acting within their scope of practice; or

(b) A person acting under the direct supervision of a health care provider holding an active license under (cite appropriate code sections), where all actions performed are within the supervising health care provider's scope of practice.

2. This section does not apply to the practice of a licensed midwife providing care pursuant to (cite code) or the practice of a certified nurse-midwife providing care pursuant to (cite code). [If other medical exemptions should apply based on the licensing system in your state, they would go here.]

3. [OPTIONAL PROVISION, but note that the CA and WA laws have no exceptions for non-medical uses.] This section does not apply if the ultrasound is performed for the sole purpose of creating keepsake photos or videos.

(B) ENFORCEMENT

1. Whenever the Attorney General or a district attorney [if applicable: a city attorney, a county counsel] has reasonable cause to believe that an Unregulated Pregnancy Clinic has violated this section, the Attorney General may issue a civil investigative demand pursuant to [cite code].

2. The Attorney General may commence an action in any court of competent jurisdiction for injunctive relief to compel compliance with the provisions of this section, and for civil penalties for violations.

3. Prior to commencing an action in court, the Attorney General shall give written notice to the Unregulated Pregnancy Clinic to cure such violations not later than 10 business days after receipt of the written notice.

4. Upon a finding by the court that an Unregulated Pregnancy Clinic has violated this section, the state shall be entitled to recover:

(a) civil penalties of up to three thousand dollars for a first violation;

(b) civil penalties of up to ten thousand dollars for a second or subsequent violation; and

(c) reasonable attorneys' fees and costs.

5. In determining the overall amount of civil penalties to assess against an Unregulated Pregnancy Clinic, the court shall include, but not be limited to the following in its consideration:

(a) the nature and severity of the violation;

(b) the size, scope, and type of the offending organization; and

(c) the good faith cooperation of the offending organization with any investigations conducted by the Attorney General pursuant to this section.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

2. Clinic Accountability and Standards Enforcement Act

Issue Overview

There are nonprofit free medical clinics in every state, dedicated to providing quality health care to people who can't afford it. Across the country, about 1,500 such clinics, often called “free clinics,” “charitable clinics,” or something else, deliver care at little or no cost.⁵⁵ These clinics are primarily staffed by licensed medical professionals, including physicians, who volunteer their time to serve their communities.

Unlike nonprofit free medical clinics, many Unregulated Pregnancy Centers (UPCs) present themselves as providers of free reproductive and maternal health care in order to advance an ideological agenda and mislead clients seeking information about abortion.⁵⁶ While these organizations have every right to oppose abortion, their advertising, signage, and websites are designed to resemble those of licensed medical clinics, even those of abortion providers.⁵⁷ Inside, staff wear lab coats and scrubs, and use intake forms to collect private health information,⁵⁸ and rooms are set up to mimic doctors' offices. Most UPCs offer free pregnancy tests⁵⁹ readily available at any pharmacy. Between one-quarter⁶⁰ and one-half⁶¹ advertise free STD/STI tests, and approximately three-quarters advertise free ultrasounds,⁶² typically performed by someone presenting as a medical professional.

UPCs operate without meaningful oversight of the medical claims they make or the services they provide. While some UPCs in a few states can obtain limited licensure, these credentials create a false sense of legitimacy. Most UPCs do not comply with the professional standards, confidentiality protections (such as HIPAA), or regulatory requirements that govern medical clinics.^{63,64} Moreover, while some UPCs list off-site doctors as “medical directors” or have RNs or LPNs onsite, they do not diagnose, prescribe, or refer people for treatment.

If a facility presents itself as a free medical clinic, it should follow the rules that apply to free medical clinics. The American Medical Association “urges the development of effective oversight for entities offering pregnancy-related health services and counseling.”⁶⁵ The American College of Obstetricians and Gynecologists says that policymakers should hold UPCs “accountable for deceptive practices by, for example, enforcing and strengthening consumer protection laws against false and misleading advertising, investigating the pervasiveness and impact of deceptive practices on patients, and partnering across the public and private sectors to ensure transparency.”⁶⁶ Those recommendations are not just good medicine; they are sound public policy.

Clinic Accountability and Standards Enforcement Act

Summary: The Clinic Accountability and Standards Enforcement Act provides that if a facility holds itself out as if it were a regulated free medical clinic, then that facility must comply with the rules that apply to a free medical clinic.

[NOTE: The substance of the bill doesn't mention UPCs. As written, it would apply to any facility. This makes it more likely to stand up in court, but please consider whether there are any facilities in the State that need explicit exemptions.]

SECTION 1. SHORT TITLE

This Act shall be called the "Clinic Accountability and Standards Enforcement Act."

SECTION 2. FINDINGS

The legislature finds that:

1. The State of [STATE] has a number of [OR SAY HOW MANY] free medical clinics [if the state has a different name for free medical clinics, substitute it throughout this bill], which provide medical care mostly to residents who cannot afford health care services because they lack health insurance or are underinsured. These free medical clinics are staffed by licensed health care providers who treat patients within their scope of practice, often with administrative assistance from laypeople. Free medical clinics are licensed under [cite code section] and their health care providers are licensed under [cite code sections].
2. Free medical clinics must comply with standard health care regulations, such as those guaranteeing the privacy and security of clients' sensitive information; limits on who can diagnose, order and interpret diagnostic tests or initiate and manage treatments; credential requirements for those who operate specific types of medical equipment and those who provide mental health treatment or counseling; and basic rules of sanitation and safety.
3. The State of [State] has a number of [or say how many] Unregulated Pregnancy Clinics (UPCs) [or use another name if it's common for your state], also known as "crisis pregnancy centers," which are organizations that primarily counsel clients against having an abortion. While individuals and organizations certainly have the right to free speech, many UPCs intentionally advertise as if they were free medical clinics in order to entice potential clients inside. Further, many UPCs are made to look like medical clinics, with waiting rooms, examination rooms, medical equipment, and staff – including nonmedical volunteers – dressed like doctors and nurses. [BILL DRAFTING NOTE: Paragraph 3 should probably be omitted in a state that funds UPCs.]

4. If a facility holds itself out to be a free medical clinic, then it should be subject to the requirements and accountability protocols of a free medical clinic.

SECTION 3. COMPLIANCE WITH RULES OF A FREE MEDICAL CLINIC

After section XXX, the following new section XXX shall be inserted:

(A) REQUIREMENTS

1. A facility that holds itself out to clients as a free medical clinic shall be subject to the state regulations that apply to a free medical clinic, including but not limited to [add applicable citations to state law]: protecting the privacy and security of clients' sensitive information; limits on who can diagnose, who can order and interpret diagnostic tests, and who can initiate and manage treatments; credential requirements for those who provide mental health treatment or counseling; the use of specific types of medical equipment such as ultrasound; and basic rules of sanitation and safety.

2. The determination of whether a facility holds itself out as a free medical clinic shall be based on the totality of the circumstances, with the following taken into consideration. If a facility:

(a) Advertises itself, including on the Internet, as if it provides free medical services.

(b) Has signage that would make a potential client believe that the facility provides free medical services.

(c) Is made to look like a medical office, with medical examination tables or equipment not generally found in a nonmedical counseling center.

(d) Has staff providing medical services or health care counseling who are not licensed medical providers but wearing medical scrubs or uniforms.

(e) Has staff who claim to be certified for particular medical tasks but that certification is not recognized by the State of [State].

(f) Claims to comply with the requirements of the Health Insurance Portability and Accountability Act (HIPAA).

(g) Claims that clients are able to file complaints against the facility with a particular federal or state health agency, if those agencies do not accept complaints for the type of facility being run.

(h) Lists in advertising or on-site a medical director who is not licensed under [cite code section for a physician, and if appropriate, for a physician assistant or nurse practitioner] or lists a medical director who is licensed but does not directly supervise, in person, the provision of all medical services provided at the facility. [NOTE: Many states have laws or regulations that define “direct supervision.” Ask your in-state advocates and bill drafters to ensure that the legislation uses language that fits your state.]

(i) Requires clients to fill out an intake form before receiving services which asks for private health information, such as a listing of prescriptions the client is taking or a listing of medical conditions that are unrelated to establishing a client’s pregnancy.

3. The Attorney General may promulgate regulations on the determination of whether a facility holds itself out as a free medical clinic of some kind.

(B) ENFORCEMENT

1. Whenever the Attorney General or a district attorney [if applicable: a city attorney, a county counsel] has reasonable cause to believe that an Unregulated Pregnancy Clinic has violated this section, the Attorney General may issue a civil investigative demand pursuant to [cite code].

2. The Attorney General may commence an action in any court of competent jurisdiction for injunctive relief to compel compliance with the provisions of this section, and for civil penalties for violations.

3. Prior to commencing an action in court, the Attorney General shall give written notice to the Unregulated Pregnancy Clinic to cure such violations not later than 10 business days after receipt of the written notice.

4. Upon a finding by the court that an Unregulated Pregnancy Clinic has violated this section, the state shall be entitled to recover:

(a) civil penalties of up to three thousand dollars for a first violation;

(b) civil penalties of up to ten thousand dollars for a second or subsequent violation; and

(c) reasonable attorneys’ fees and costs.

5. In determining the overall amount of civil penalties to assess against an Unregulated Pregnancy Clinic, the court shall include, but not be limited to the following in its consideration:

- (a) the nature and severity of the violation;
- (b) the size, scope, and type of the offending organization; and
- (c) the good faith cooperation of the offending organization with any investigations conducted by the Attorney General pursuant to this section.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

3. Professional Responsibility in Reproductive Health Act

Issue Overview

Licensed medical providers must follow a professional code of conduct, which state licensing agencies enforce through established disciplinary procedures.

Many licensed medical providers volunteer at free medical clinics that offer free or low-cost medical care. [Your state may call them “free clinics,” “charitable clinics,” or another term.] These clinics follow standard health care regulations, including requirements for protecting clients’ private health information, restricting who can diagnose and treat people, ensuring proper credentials for mental health providers, regulating who can operate medical equipment, and following basic sanitation and safety rules.

Unregulated Pregnancy Clinics (UPCs) often present themselves as free medical clinics, even though they are not. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.⁶⁷ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even, at times, as abortion providers.⁶⁸ Inside, they often resemble medical offices, with waiting rooms and exam rooms outfitted with medical equipment and staff in lab coats and scrubs. Clients must often fill out intake forms that ask for extensive private health information.⁶⁹

Between 72⁷⁰ and 77⁷¹ percent of UPCs use ultrasound machines for non-medical purposes. These are not diagnostic tests from which medical conclusions can be drawn. UPCs advertise “limited” ultrasounds,⁷² which they perform to show clients pictures of the uterus they hope will emotionally influence those considering abortion to continue the pregnancy. UPCs are using this medical equipment unethically;⁷³ one of the three major UPC umbrella groups, Care Net, acknowledges this when it truthfully addresses the question “Can we just do ultrasounds without becoming a medical clinic?” with the answer, “Absolutely not. The use of ultrasound energy in any form is considered the practice of medicine.”⁷⁴

UPC intake forms are often invasive. Even though they are not medical providers, many UPCs ask for prescription drug lists, past and current illnesses, and medical conditions unrelated to their services. Some ask inappropriate questions like the name or age of the person who impregnated the client, whether the client is living with someone they aren’t married to, when they first had sex, or whether they have multiple partners or same-sex partners. Collecting such information is unnecessary and likely unethical, given that most UPCs only provide over-the-counter pregnancy tests, STD/STI tests without treatment, lay

counseling, and material resources like diapers and wipes. Further, even though they don't bill insurance, UPCs often ask for clients' government identification documents, insurance information, income, employer, or eligibility for public assistance.⁷⁵

Because the vast majority of UPCs are not medical offices, they are not required to protect clients' personal identifying data and private health information. Unlike standard medical clinics, UPCs are not governed by HIPAA or state privacy laws.⁷⁶ National UPC organizations admit this.⁷⁷ Yet many UPCs falsely claim to be "HIPAA compliant," giving clients a false sense of security.

Many UPCs do not meet basic medical standards. Most states don't require UPCs to follow any health or safety regulations, not even basic sanitation rules.

Many UPCs have been documented giving clients false or misleading information. For example, clients may be given false information as part of their ultrasound, or gestational age may be willfully miscalculated to delay or deter clients from seeking an abortion.⁷⁸

The state has a responsibility to protect people from misleading or unethical practices. The Society for Adolescent Health and Medicine and the North American Society for Pediatric and Adolescent Gynecology jointly stated support for this policy position: "[We] urge all governmental, regulatory (e.g., medical and nursing boards), and accrediting bodies with responsibility for enforcing medical and ethical practice standards to ensure that health care professionals providing services at CPCs and services delivered at CPCs adhere to established standards of care."⁷⁹ Similarly, the American Medical Association "urges the development of effective oversight for entities offering pregnancy-related health services and counseling."⁸⁰

Professional Responsibility in Reproductive Health Act

Summary: The Professional Responsibility in Reproductive Health Act lists specific circumstances which constitute unprofessional conduct by a licensed health care provider in order to ensure that all clients are treated with appropriate care.

Based on [VT SB 37 \(2023\)](#)

[NOTE: The substance of the bill doesn't mention UPCs. As written, it would apply to a health care provider at any facility. This makes it more likely to win a challenge in court, but please consider whether there are any facilities in the State that need explicit exemptions.]

SECTION 1. SHORT TITLE

This Act shall be called the "Professional Responsibility in Reproductive Health Act."

SECTION 2. FINDINGS

The legislature finds that:

1. All licensed health care providers in [State] are subject to a code of conduct, which is a set of principles and guidelines that set the ethical and professional standards for those providers.
2. Many licensed health care providers volunteer to staff free medical clinics, which provide medical care mostly to residents who cannot afford health care services because they lack health insurance or are underinsured. At such clinics, licensed health care providers must comply with standard health care regulations, such as those concerning the privacy and security of clients' sensitive information, requirements about who can order and interpret diagnostic tests, credentialing regulations for those who operate specific types of medical equipment, and basic rules of sanitation and safety. Licensed providers volunteering at free medical clinics is laudable and should be encouraged.
3. Some licensed health care providers volunteer to staff unregulated centers where medical care is secondary to another primary mission. While organizations and individuals have the right to free expression, licensed medical professionals must comply with ethical and professional standards whenever they present themselves as if they were acting in their capacities as licensed providers.
4. It is essential for the State to make explicit the ethical and professional standards that apply to licensed providers volunteering at unregulated free clinics.

SECTION 3. PROFESSIONAL RESPONSIBILITY

After section XXX, the following new section XXX shall be inserted:

[THESE ARE ADDED TO THE EXISTING CODE ABOUT UNPROFESSIONAL CONDUCT]

In addition to any other provision of law, the following conduct by a licensee constitutes unprofessional conduct. When that conduct is by an applicant or person who later becomes an applicant, it may constitute grounds for denial of a license or other disciplinary action. Any of the following items or any combination of items, whether the conduct at issue was committed within or outside the State, shall constitute unprofessional conduct:

- (1) Willfully representing, or working alongside, unlicensed health care providers in a manner that misrepresents them to clients as if they were licensed.
- (2) Willfully representing to clients, or knowing it is being represented, that the facility where the licensee is working is a medical facility that both diagnoses and treats clients' medical conditions when, in fact, it does not.
- (3) Willfully representing to clients, or knowing it is being represented, that an examination or test, such as an ultrasound examination or STD/STI test, is being conducted or interpreted as if it were a diagnostic examination or test like one at a hospital when, in fact, it is not.
- (4) Willfully representing to clients, or knowing such representation is occurring, that a facility needs a list of the client's medications, or a thorough medical history, or other sensitive private health information when a reasonable licensee would know that a such information is not in any way needed for the services actually provided at that facility.
- (5) Willfully representing, or knowing it is being represented, that clients' sensitive private health information is protected by the Health Insurance Portability and Accountability Act (HIPAA) or protected by a binding rules that provide privacy and security guarantees, when, in fact, HIPAA or other privacy and security guarantees are not provided.
- (6) Willfully representing, or knowing it is being represented, that a facility operates under the sanitation and safety standards of a licensed medical facility when, in fact, it does not.
- (7) Willfully providing inaccurate health or medical information to a client, or knowing it is being provided, including misrepresentation of a client's medical condition.

(8) Willfully representing, or knowing it is being represented, that the designated Medical Director or medical supervisor of a facility does not, in fact, directly supervise the medical care and compliance with regulations and health care standards at that facility.

[NOTE: THE EXISTING CODE IN WHICH THIS IS PLACED ALREADY HAS ENFORCEMENT MECHANISMS BUILT IN.]

4. Qualified Oversight in Reproductive Care Act

Issue Overview

Unregulated Pregnancy Clinics (UPCs) often present themselves as free medical clinics to mislead clients seeking abortion. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.⁸¹ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even, at times, as abortion providers.^{82,83} Inside, they often resemble medical offices, with waiting rooms and exam rooms outfitted with medical equipment, and staff in lab coats and scrubs. Clients must often fill out intake forms that ask for private health information.⁸⁴

The vast majority of UPCs advertise medical or quasi-medical services. Nearly all offer free pregnancy tests⁸⁵ readily available at any pharmacy. Between one-quarter⁸⁶ and one-half⁸⁷ advertise free STD/STI tests, and approximately three-quarters advertise free ultrasounds,⁸⁸ typically performed by someone presenting as a medical professional.

Some UPCs have off-site doctors listed as medical directors or employ on-site RNs or LPNs, but they do not diagnose medical conditions, write prescriptions, or refer people for treatment. Because most of these centers are not regulated as conventional medical clinics, they are not required to follow standard rules on client confidentiality, medical accuracy, or even basic sanitation.⁸⁹

The state has a responsibility to protect people from misleading or unethical practices. The Society for Adolescent Health and Medicine and the North American Society for Pediatric and Adolescent Gynecology jointly stated support for this policy position: “[We] urge all governmental, regulatory (e.g., medical and nursing boards), and accrediting bodies with responsibility for enforcing medical and ethical practice standards to ensure that health care professionals providing services at CPCs and services delivered at CPCs adhere to established standards of care.”⁹⁰ Similarly, the American Medical Association “urges the development of effective oversight for entities offering pregnancy-related health services and counseling.”⁹¹

Qualified Oversight in Reproductive Care Act

Summary: The Qualified Oversight in Reproductive Care Act requires that, if a pregnancy clinic asserts that the facility has a medical director, that medical professional must be identified to clients.

SECTION 1. SHORT TITLE

This Act shall be called the “Qualified Oversight in Reproductive Care Act.”

SECTION 2. FINDINGS

The legislature finds that:

1. Most Unregulated Pregnancy Clinics (UPCs) do not have a physician, physician assistant or nurse practitioner who supervises, in person, medical services provided at the facility.
2. However, many UPCs without an on-site medical supervisor nevertheless represent to clients that the facility has a medical director without naming that medical professional. The claim that such a facility has a medical director gives clients a false sense of security.
3. It is vital for clients to access early and reliable medical care to confirm pregnancy, gestational age, identify ectopic pregnancy, fetal anomaly, issues with the placenta or amniotic fluid, and any factors that could make the pregnancy high risk or dangerous. Such medical care may also be important for the health of the fetus.
4. If a pregnancy clinic asserts that it has a medical director, then that individual should be named. Clients receiving physical or mental health services require and deserve this information.

SECTION 3. MEDICAL DIRECTOR RESPONSIBILITY

After section XXX, the following new section XXX shall be inserted:

(A) DEFINITIONS—In this section:

“Unregulated Pregnancy Clinic” means a facility primarily offering determination of pregnancy and pregnancy counseling that does not have one or more physicians licensed under [cite code], a physician assistant under [cite code], or an advanced practice nurse under [cite code], on staff or under contract who provide or directly supervise, in person, the provision of all of the services provided at the facility. [NOTE: Many states have laws or regulations that define “direct supervision.” Ask your in-state advocates and bill drafters to ensure that the legislation uses language that fits your state.]

(B) DISCLOSURE OF MEDICAL DIRECTOR BY AN UNREGULATED PREGNANCY CLINIC

Whenever an Unregulated Pregnancy Clinic asserts, orally or in writing, that the facility has a medical director, chief medical officer, physician, physician assistant, nurse practitioner or other trained medical provider who performs or supervises medical services for the facility, the Unregulated Pregnancy Clinic shall disclose the name and principal business address and phone number at the same time and in the same manner as the assertion, including: on the Internet, on signs or advertisements, and at the physical location.

(C) ENFORCEMENT

1. Whenever the Attorney General or a district attorney [if applicable: a city attorney, a county counsel] has reasonable cause to believe that an Unregulated Pregnancy Clinic has violated this section, the Attorney General may issue a civil investigative demand pursuant to [cite code].
2. The Attorney General may commence an action in any court of competent jurisdiction for injunctive relief to compel compliance with the provisions of this section, and for civil penalties for violations.
3. Prior to commencing an action in court, the Attorney General shall give written notice to the Unregulated Pregnancy Clinic to cure such violations not later than 10 business days after receipt of the written notice.
4. Upon a finding by the court that an Unregulated Pregnancy Clinic has violated this section, the state shall be entitled to recover:
 - (a) civil penalties of up to three thousand dollars for a first violation;
 - (b) civil penalties of up to ten thousand dollars for a second or subsequent violation; and
 - (c) reasonable attorneys' fees and costs.
5. In determining the overall amount of civil penalties to assess against an Unregulated Pregnancy Clinic, the court shall include, but not be limited to the following in its consideration:
 - (a) the nature and severity of the violation;
 - (b) the size, scope, and type of the offending organization; and
 - (c) the good faith cooperation of the offending organization with any investigations conducted by the Attorney General pursuant to this section.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

5. Reproductive Care Access and Information Act

Issue Overview

The Unregulated Pregnancy Clinic (UPC) industry is large and widespread. More than 2,600 pregnancy centers operate in all 50 states,⁹² most of which affiliate with one or more of three national organizations: Care Net, Heartbeat International, and National Institute of Family and Life Advocates (NIFLA). Between 2019 and 2022 alone, the UPC industry reported over \$5.6 billion in revenue, more than \$4.9 billion in expenses, and \$2.3 billion in assets.⁹³

UPCs often present themselves as free medical clinics to mislead clients seeking abortion. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.⁹⁴ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even, at times, as abortion providers.^{95,96} Inside, they often resemble medical offices, with waiting rooms and exam rooms outfitted with medical equipment, and staff in lab coats and scrubs. Clients must often fill out intake forms that ask for private health information.⁹⁷

UPC clients have reported that they believed they were at an actual medical clinic,^{98,99} where staff made false claims about reproductive health care under the guise of medical authority. UPCs often target people who are young, have lower incomes, and may not be familiar with the difference between a traditional medical clinic and a UPC. These clients are vulnerable; many may be afraid. This vulnerability is exploited when someone who may or may not be an appropriately licensed medical professional makes alarming medical claims to someone in a state of stress. That's routinely the UPC strategy: use medical impersonation to push falsehoods about the safety of standard reproductive health care.¹⁰⁰

Residents of [State] are being inundated with ads for UPCs. Online ads, billboards, and signs frequently make UPCs appear to be standard medical clinics staffed by licensed medical practitioners, when, overwhelmingly, they are not.

The best way to diminish the negative impact of UPCs is to promote fact-based reproductive health care. Between 2021 and 2024, state legislatures allocated over half a billion in taxpayer dollars (\$513 million) to the UPC industry.¹⁰¹ It is time to counterprogram against the UPCs' ubiquitous "Pregnant? Need Help?" style ads.

We also need to promote more accessible, trustworthy resources. UPCs operate and advertise several centralized hotlines and online directories to direct clients their way, such as Heartbeat International's Option Line¹⁰² and Directory of Pregnancy Health Centers,¹⁰³

Care Net's National Hotline¹⁰⁴ and directory of UPCs,¹⁰⁵ the Pregnancy Decision Line,¹⁰⁶ and the "Pregnant, Need Help" Hotline.¹⁰⁷ While similar resources exist for all-options clinics, they must be easier to use, more widely promoted, and better known.

Reproductive Care Access and Information Act

Summary: The Reproductive Care Access and Information Act directs the state Department of Health to spend \$X,000,000 creating and promoting an 800 number and a website to provide contact information for nearby medical clinics that provide a full range of pregnancy services, including birth control, emergency contraception and abortion.

[NOTE: Unregulated Pregnancy Clinics (UPCs) often posture as abortion clinics and reproductive health care providers, ambiguously advertising themselves as such. Massachusetts created a program which, in part, sought to inform people that UPCs are not medical clinics. This measure addresses the same problem from the opposite direction, helping to advertise regulated reproductive health care clinics. Conservative states have spent \$1 billion to promote UPCs and much of that goes into advertising. It is time for more progressive states to step up and counterprogram against the UPCs' ubiquitous "Pregnant? Need Help?" style ads. This measure is particularly timely because it is anticipated that the current federal Administration and U.S. Congress will direct hundreds of millions of dollars in new federal funding to directly support UPCs.]

[BILL DRAFTING NOTE: This might be a bill or a budget amendment.]

SECTION 1. SHORT TITLE

This Act shall be called the "The Reproductive Care Access and Information Act."

SECTION 2. FINDINGS

The legislature finds that:

1. Unregulated Pregnancy Clinics (UPCs) [local advocates may want to use another name, so consult with them] are facilities that purport to offer unbiased reproductive health care information, goods and services, but instead they are primarily intended to prevent clients from seeking reproductive health care.
2. Nationwide, UPCs spend hundreds of millions of dollars each year promoting their facilities as if they were regulated medical clinics.
3. Residents of [State] are being inundated with billboards and online advertising that frequently make UPCs seem like medical clinics staffed by licensed medical practitioners, when, overwhelmingly, they are not.
4. The state should provide or support telephone and Internet directories for unbiased reproductive medical services, and those directories must be advertised.

SECTION 3. PROMOTION OF REPRODUCTIVE HEALTH CARE

After section XXX, the following new section XXX shall be inserted:

(A) PROGRAM TO PROMOTE REPRODUCTIVE HEALTH CLINICS

1. The Department of Health is directed to create or support telephone and online directories of reproductive health facilities which direct users to medical clinics that provide a full range of pregnancy services, including birth control, emergency contraception and abortion, and to social service agencies providing infant care supplies.
2. The telephone resource must be a toll-free number staffed by live operators 24 hours per day, seven days per week, and the website must be highly user-friendly, ensuring accessibility for users with limited Internet skills.
3. Both the toll-free number and the website must allow callers and users to:
 - (a) Identify a selection of the nearest medical clinics that provide a full range of pregnancy services, including birth control, emergency contraception and abortion; and
 - (b) Contact those clinics by providing street addresses, web addresses and phone numbers.
4. The Department may create a new toll-free number and website for this program, or it may partner with other states or with one or more nonprofit organizations using existing or newly-created resources.
5. Once the toll-free number and website are created, the Department shall promote these resources through existing government means of communications as well as through paid advertising.

(B) APPROPRIATION

For the [fiscal year] Fiscal Year: \$5,000,000 [or appropriate amount] is appropriated to the [Department of Health] to create and advertise toll-free telephone and website directories of medical clinics that provide a full range of pregnancy services.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

Model Bills: Transparency and Accountability

6. Public Health Assessment of Pregnancy Services Act

Issue Overview

Unregulated Pregnancy Clinics (UPCs) often present themselves as free medical clinics to mislead clients seeking abortion. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.¹⁰⁸ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even at times as abortion providers.^{109,110} Inside, they often resemble medical offices, with waiting rooms, exam rooms outfitted with medical equipment, and staff in lab coats and scrubs. Clients must often fill out intake forms that ask for private health information.¹¹¹

The vast majority of UPCs advertise medical or quasi-medical services. The vast majority of UPCs advertise medical or quasi-medical services. Nearly all offer free pregnancy tests¹¹² readily available at any pharmacy. Between one-quarter¹¹³ and one-half¹¹⁴ advertise free STD/STI tests, and approximately three-quarters advertise free ultrasounds,¹¹⁵ typically performed by someone presenting as a medical professional.

UPCs typically operate without medical oversight or standards of care, exposing people to risk. Some list off-site doctors as medical directors, and some have on-site RNs or LPNs, but they don't diagnose medical conditions, write prescriptions, or refer people for care. Because most UPCs are not regulated as conventional medical clinics, they are not required to follow rules around client confidentiality, medical accuracy, or sanitation.¹¹⁶

UPC clients have reported that they believed they were at an actual medical clinic,^{117,118} where staff made false claims about reproductive health care under the guise of medical authority. UPCs often target people who are young, have lower incomes, and may not be familiar with the difference between a traditional medical clinic and a UPC. These clients are vulnerable; many may be afraid. This vulnerability is exploited when someone who may or may not be an appropriately licensed medical professional makes alarming medical claims to someone in a state of stress. That's routinely the UPC strategy: use medical impersonation to push falsehoods about the safety of standard reproductive health care.¹¹⁹

UPCs' use of ultrasound machines is unethical. UPCs do not perform diagnostic ultrasounds that address medical issues. Instead, they offer so-called "limited" or "non-diagnostic" ultrasounds, intended to show pictures of the uterus they hope will dissuade clients from seeking an abortion. This is a misuse of medical equipment;¹²⁰ one of the three major UPC umbrella groups, Care Net, admits as much when it truthfully addresses the question "Can we just do ultrasounds without becoming a medical clinic?" with the answer,

“Absolutely not. The use of ultrasound energy in any form is considered the practice of medicine.”¹²¹

Because the vast majority of UPCs are not medical offices, they can and do violate clients’ privacy. Traditional medical clinics must follow the privacy, confidentiality, and records security requirements of the Health Insurance Portability and Accountability Act (HIPAA). UPCs are not subject to HIPAA and, therefore, are not required to protect clients’ private health information.¹²² On the contrary, many UPCs maintain client records in online databases accessible by third parties outside the UPC.¹²³ The national UPC industry employs these records to amass “digital dossiers” on clients, their doctors, and their loved ones that could be used in pregnancy-related prosecutions.¹²⁴

We must regulate these pregnancy centers. The American Medical Association “urges the development of effective oversight for entities offering pregnancy-related health services and counseling.”¹²⁵ The American College of Obstetricians and Gynecologists says that policymakers should hold UPCs “accountable for deceptive practices by, for example, enforcing and strengthening consumer protection laws against false and misleading advertising, investigating the pervasiveness and impact of deceptive practices on patients, and partnering across the public and private sectors to ensure transparency.”¹²⁶

Public Health Assessment of Pregnancy Services Act

Summary: There is a lack of public information about the widespread industry of Unregulated Pregnancy Clinics (UPCs). The Public Health Assessment of Pregnancy Services Act commissions a thorough study by the state Department of Health.

Based on [NY AB 5499 \(2022\)](#)

[BILL DRAFTING NOTE: States have different regulatory schemes and may have a different name for UPCs, so please work with local advocates to decide the best way to name and define them in your state legislation.]

SECTION 1. SHORT TITLE

This Act shall be called the “Public Health Assessment of Pregnancy Services Act.”

SECTION 2. FINDINGS

The legislature finds that:

1. Unregulated Pregnancy Clinics (UPCs), also known as “crisis pregnancy centers” or “pregnancy health centers” operate in all 50 states, the vast majority of which are affiliated with one of three national advocacy organizations: Care Net, Heartbeat International and National Institute of Family and Life Advocates (NIFLA).
2. The UPC industry is large and widespread. Nationally, there are more than 2,600 UPCs¹²⁷ and, between 2019 and 2022 alone, the UPC industry received over \$5.6 billion in revenue, spent over \$4.9 billion in expenses, and held \$2.3 billion in assets.¹²⁸
3. There is a dearth of public information on UPC industry operations and impact, including: its revenues and expenses; staffing and credentials of personnel – including volunteers – providing physical and mental health services; unique number of clients served; type and scope of services and material support provided; cost analyses compared to care and provision of material support provided outside the UPC industry; impact of UPC care on maternal and infant health outcomes; policies and practices to protect client health and safety; policies and practices to keep clients’ personal information confidential and secure; use of ultrasound machines; content of curriculum used in educational programming required for clients to receive support; medical accuracy of counseling, classes and materials; or impact on client access to prenatal care, birth outcomes, or other measures of health and wellness.

4. It is essential to conduct an independent assessment of the operation and impact of the UPC industry in [State] to determine whether their clients require additional protections.

SECTION 3. STUDY OF UNREGULATED PREGNANCY CLINICS

After section XXX, the following new section XXX shall be inserted:

(A) DEFINITION—In this section:

“Unregulated Pregnancy Clinic” means a health facility primarily offering determination of pregnancy, pregnancy counseling, and material support for parents that does not have one or more physicians licensed under [cite code], physician assistants under [cite code], or advanced practice nurses under [cite code], on staff or under contract who provide or directly supervise, in person, the provision of all of the services provided at the facility. [NOTE: Many states have laws or regulations that define “direct supervision.” Ask your in-state advocates and bill drafters to ensure that the legislation uses language that fits your state.]

(B) AUTHORIZATION AND STUDY SCOPE

1. The Secretary of Health (hereinafter “the Secretary”) is hereby authorized and directed to conduct a study and issue a report detailing how the UPC industry operates, including: its revenues and expenses; staffing and credentials of personnel – including volunteers – providing physical or mental health services; unique number of clients served; types and amounts of services and material support provided; policies and practices to keep clients’ personal information confidential and secure; the operation and use of its ultrasound machines; and the medical accuracy of counseling, classes and materials provided.

2. The Secretary shall request, and may subpoena, [or may request the Attorney General or the House or Senate Health Committee to subpoena] data and information from Unregulated Pregnancy Clinics, their umbrella organizations or their contractors to meet the purposes of the study.

3. The information to be obtained about Unregulated Pregnancy Clinics shall include but is not limited to:

(a) What state and/or federal funds or tax or other subsidies, if any, are directly or indirectly allocated to such facilities in the state and the names and locations of such organizations receiving government funding;

- (b) Whether such facilities in the state are part of larger umbrella organizations that operate Unregulated Pregnancy Clinics across the country or across [State], and if so, whether those umbrella organizations receive state and/or federal funding;
- (c) Organizational revenue budgets for the most recently completed fiscal year of the center's sources of funding, specifying contributions for each of the following sources: governments, foundations, corporations, and individuals.
- (d) Organizational expense budgets for the most recently completed fiscal year listing the center's expenses in the same categories listed on the IRS 990 form.
- (e) The numbers of full-time paid staff, part-time paid staff, and volunteers and, for each, how many are licensed medical professionals, indicating the relevant and current licensing information for each, and which practice on-site and how frequently they are present on-site.
- (f) The numbers of unique clients served during the most recently completed fiscal year, and a breakdown of clients for pregnancy tests, ultrasounds, STD/STI tests, pregnancy counseling, student sexual risk education, parenting education, and material support.
- (g) The amount of material support provided, including the numbers of diapers, packs of baby wipes, baby clothing outfits, car seats, strollers, cribs, and containers of baby formula, and the numbers of clients provided with each.
- (h) Whether Unregulated Pregnancy Clinics market themselves as medical providers verbally or through written communication in print or online.
- (i) The medical accuracy of information given to clients or potential clients both orally and in writing.
- (j) Whether such facilities collect sensitive personal information from clients, how or whether they protect the confidentiality of clients' health information, and whether they claim to be covered by HIPAA. [If state privacy laws apply, add "whether they comply with (cite state law)."]
- (k) Whether such facilities use ultrasound machines and whether or not they are operated by licensed medical professionals or technicians directly supervised by licensed medical professionals whose scope of practice includes performing and interpreting obstetric ultrasounds.
- (l) Whether such facilities target vulnerable populations in their marketing materials.

(C) STUDY TIMELINE AND STRUCTURE

1. The study will commence no later than three months following the effective date of this act and be completed no more than nine months later.
2. [The NY law creates a task force of nine members to support the Department of Health in the development of the study, the review of the findings and the establishment of specific recommendations for solutions to address any service gaps or negative impact in the state identified through the study. If you can delegate this directly to the Department of Health without a task force, it will likely speed things up.]
3. The Secretary shall issue a report to the governor and the legislature, and publish the report on its public website, containing the findings and policy recommendations. The report may include de-identified client information in the aggregate but shall not include personally identifiable information.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

7. Financial Transparency Act

Issue Overview

The Unregulated Pregnancy Clinic (UPC) industry is large and widespread. More than 2,600 pregnancy centers operate in all 50 states,¹²⁹ most of which affiliate with one or more of three national organizations: Care Net, Heartbeat International, and National Institute of Family and Life Advocates (NIFLA).

Over the past three years, [State] has granted \$XXXX to pregnancy centers. XX pregnancy centers operate in [State], and XX has received funding from the state. However, there is little transparency in the grant process. It is not clear: (a) how much money has been granted from year to year; (b) who receives it and how much is passed along to other groups or individuals; (c) how many unique clients are served in a year; (d) what measurable quantity of products and services each of those clients receive; (e) whether grantees are appropriately audited; and (f) whether audits are reviewed to ensure that state funds are spent in accordance with grant guidelines and protocols.

It's unclear whether state funding of pregnancy centers is needed since most have excess revenues. Based on the most recently available IRS 990 forms, about 2,100 pregnancy center locations reported more than \$1.9 billion in revenue and \$1.7 billion in expenses.¹³⁰ The current Administration and U.S. Congress are seeking to allocate hundreds of millions of new dollars into these facilities.

The level of state funding does not reasonably match the services provided. Based on IRS 990 forms, the average pregnancy center reports revenue of \$905,000 a year.¹³¹ And since nationally, 2,633 facilities¹³² report seeing about 975,000 new clients annually,¹³³ the average pregnancy center serves about 1.4 new clients per business day, only seven in a 5-day week. How many staff are reasonably needed to accomplish that?

The average pregnancy center holds more than \$1 million in assets. Approximately 2,100 pregnancy center locations reported on IRS 990 forms that they have \$2.5 billion in assets, which averages almost \$1.2 million in assets per facility.¹³⁴

The state does not know how its grant dollars are being spent. We should all agree that tax dollars should not be spent when they're not needed, nor should they be allocated without clear fiscal transparency and impact analysis requirements. The American Medical Association urges "any entity offering crisis pregnancy services...be transparent with respect to their funding and sponsorship relationships."¹³⁵ That's not too much to ask.

Financial Transparency Act

Summary: The Financial Transparency Act requires that, in order to receive grants from the state, a [Insert what the state calls a Unregulated Pregnancy Clinic] must provide information to prove it is capable of spending the grant in accordance with its stated purposes and subsequently report on how taxpayer dollars were actually spent.

SECTION 1. SHORT TITLE

This Act shall be called the “Financial Transparency Act.”

SECTION 2. FINDINGS

The legislature finds that:

1. [Insert what the state calls UPCs], also known as “crisis pregnancy centers,” operate in all 50 states, the vast majority of which are affiliated with one or more of three national organizations: Care Net, Heartbeat International and National Institute of Family and Life Advocates (NIFLA).
2. Nationally, there are an estimated 2,600 of these facilities¹³⁶ and, between 2019 and 2022 alone, that industry received over \$5.6 billion in revenue, spent over \$4.9 billion in expenses, and held \$2.3 billion in assets.¹³⁷
3. Over the past [XX] years, [STATE] has granted more than \$[AMOUNT] to [insert what the state calls UPCs]. However, there is little transparency in this grant process. It is not clear: (a) how much money has actually been granted from year to year; (b) who receives it and how much is passed along to other groups or individuals; (c) how many unique clients are served in a year; (d) what measurable quantity of products and services each of those clients receive; (e) whether the nonprofits are appropriately audited; and (f) whether audits are reviewed to ensure that state funds are spent in accordance with grant guidelines and protocols.
4. Tax dollars should not be wasted or allocated without clear requirements for fiscal transparency and impact analysis. The legislature and the state administration have an obligation to ensure that funds granted to any nonprofit are spent efficiently and effectively.

SECTION 3. TRANSPARENCY OF FUNDING FOR [Insert what the state calls UPCs]

After section XXX, the following new section XXX shall be inserted:

(A) FINANCIAL TRANSPARENCY REQUIRED

1. A [insert what the state calls UPCs] shall not qualify for a state grant under any program unless the applicant provides to the granting agency:

(a) An organizational revenue budget for the most recently completed fiscal year of the nonprofit's sources of funding, specifying each government grant and the total contributions for each of the following sources: governments, foundations, corporations, and individuals.

(b) An organizational expense budget for the most recently completed fiscal year listing the nonprofit's expenses in the same categories listed on the IRS 990 form.

(c) A program expense budget listing the amount of state funds that would be used in each expense category.

(d) The numbers of full-time paid staff, part-time paid staff, and volunteers and, for each, how many are licensed medical professionals, indicating the relevant and current licensing information for each.

(e) The numbers of unique clients served during the most recently completed fiscal year, and a breakdown of clients for pregnancy tests, ultrasounds, STD/STI tests, pregnancy counseling, student sexual risk education, parenting education, and material support.

(f) The amount of material support provided, including the numbers of diapers, packs of baby wipes, baby clothing outfits, car seats, strollers, cribs, and containers of baby formula, and the numbers of clients provided with each.

2. At the completion of a grant to a [insert what the state calls CPCs], the grantee shall provide to the granting agency the following:

(a) An organizational revenue budget for the most recently completed fiscal year of the nonprofit's sources of funding, specifying each government grant and the total contributions for each of the following sources: governments, foundations, corporations, and individuals.

(b) An organizational expense budget for the most recently completed fiscal year listing the nonprofit's expenses in the same categories listed on the IRS 990 form.

(c) The numbers of full-time paid staff, part-time paid staff, and volunteers actually employed during the period of the grant and, for each, how many were licensed medical professionals and detailing what medical license each medical professional staff member and volunteer holds, and whether they are certified to practice in the State of [STATE].

(d) The numbers of unique clients served during the period of the grant, and a breakdown of clients for pregnancy tests, ultrasounds, STD/STI tests, pregnancy counseling, student sexual risk education, parenting education, and material support.

(e) The amount of material support provided, including the numbers of diapers, packs of baby wipes, baby clothing outfits, car seats, strollers, cribs, and containers of baby formula, and the numbers of clients provided with each.

(f) An independent financial audit for each facility, or an audit of multiple affiliated facilities if the data is presented for each individual location.

(B) PARTIAL PUBLIC DISCLOSURE

(1) Within 10 business days of a request, a [insert what the state calls CPCs] shall provide to a client, without charge, a copy of that client's records possessed by the facility.

(2) Within 20 business days of a request, a granting agency shall provide to a member of the public a copy of any document listed in this section, with any individually identifiable health information redacted.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

8. Responsible Use of Public Health Dollars Act

Issue Overview

The Unregulated Pregnancy Clinic (UPC) industry is large and widespread. More than 2,600 pregnancy centers operate in all 50 states,¹³⁸ most of which affiliate with one or more of three national organizations: Care Net, Heartbeat International, and National Institute of Family and Life Advocates (NIFLA).

Over the past three years, [State] has granted \$XXXX to pregnancy centers. XX pregnancy centers operate in [State], and XX has received funding from the state. However, there is little transparency in the grant reporting or accounting process.

National data suggest that pregnancy centers have considerable income outside of state funding. Based on IRS 990 forms, approximately 2,100 pregnancy center locations had more than \$1.9 billion in revenues, meaning that the average pregnancy center has revenues from all sources of about \$905,000 a year.¹³⁹

National data suggest that pregnancy centers hold considerable assets. About 2,100 pregnancy center locations reported on IRS 990 forms that they have \$2.5 billion in assets, an average of almost \$1.2 million per facility.¹⁴⁰

It is routine for state grantees of all types to submit reports and evaluations. Such a requirement is also almost universally required for state grants relating to education, health care, and social services. Nevertheless, some [insert what your state calls UPCs] fail to meet these reporting requirements. [Give examples if you can; unfortunately, it seems common for UPCs to fail their reporting requirements.]

It is routine for state grantees of all types to account for the use of funds honestly and straightforwardly. Nevertheless, some [insert what your state calls UPCs] charge the state far more for products used and services administered – such as pregnancy tests, ultrasounds, STD/STI tests, diapers, packs of baby wipes, baby clothing outfits, car seats, strollers, cribs, and containers of baby formula – than they paid. These mark-ups may exceed 50 or 100 percent of the product's actual price.

Taxpayer dollars should not be wasted or misallocated. The legislature and the state administration have an obligation to ensure that funds granted to any nonprofit are spent efficiently and effectively. The American Medical Association urges “any entity offering crisis pregnancy services...be transparent with respect to their funding and sponsorship relationships.”¹⁴¹ That's not too much to ask.

Responsible Use of Public Health Dollars Act

Summary: The Responsible Use of Public Health Dollars Act requires that, in order to receive grants from the state, a [Insert what the state calls a Crisis Pregnancy Center] must file all reports and documentation due for prior grants [and/or] cannot excessively mark up the prices for products provided to clients.

[BILL DRAFTING NOTE: This might be a bill or a budget amendment. Sections 3(A) and 3(B) might be offered together or separately, depending on the reporting and accounting problems in your state.]

SECTION 1. SHORT TITLE

This Act shall be called the “Responsible Use of Public Health Dollars Act.”

SECTION 2. FINDINGS

1. Over the past XXX years, the State of [State] has granted more than [\$ AMOUNT] to [insert what the state calls UPCs], including [\$ AMOUNT] over the past three years.
2. As part of the grant process, a [insert what the state calls UPCs] agrees to submit reports and evaluations [within 60 days after the grant period ends]. Such a requirement is also almost universally mandated for state grants relating to education, health care and social services.
3. Nevertheless, some grantees are failing to meet these reporting requirements. [Give examples if you can. Unfortunately, it seems common for UPCs to fail to report or provide inadequate reports.]
4. As part of the grant process, [insert what the state calls UPCs] list prices that they are charging the state for products such as pregnancy tests, ultrasounds, STD/STI tests, diapers, packs of baby wipes, baby clothing outfits, car seats, strollers, cribs, and containers of baby formula.
5. However, some UPCs excessively mark-up these prices, a kind of handling charge, when billing the state. These mark-ups may exceed 50 or 100 percent of the actual price of the product. It is an unreasonable use of state funds to pay for excessive mark ups.
6. Tax dollars should not be wasted or misallocated. The legislature and the state administration have an obligation to ensure that funds granted to any nonprofit are spent efficiently and effectively.

SECTION 3. REPORTING AND ACCOUNTING REQUIRED

After section XXX, the following new section XXX shall be inserted:

(A) PROPER REPORTING

1. A [insert what the state calls UPCs] shall not qualify for a state grant under any program if the grant applicant has failed to file any report or meet any statutory, regulatory or contract requirement of any prior state grant.
2. Any funds due or owed to a [insert what the state calls a UPC] that has failed to file a required report will be held and not released until all required reports are received and reviewed.
3. Any [insert what the state calls a UPC] that fails to comply with reporting requirements will be prohibited from applying for any further funding for a six-month period beginning the day after any report was overdue.

(B) PROPER ACCOUNTING

1. A [insert what the state calls UPCs] shall not qualify for a state grant under any program if the facility lists a price for a product provided to clients that exceeds [ten percent] more than the actual price the facility paid for that product.
3. Any [insert what the state calls a UPC] that fails to comply with the accounting requirement in this subsection shall be prohibited from applying for any further funding for a six-month period beginning the day after any report where the state is charged in excess of [ten percent] more than the actual price the facility paid.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

9. Public Right to Know (Model FOIA or Public Records Letter)

Issue Overview

Legislators and the public know little about the state’s interactions with Unregulated Pregnancy Clinics (UPCs). In states that grant funding to UPCs, it is not clear: (a) how much money has been granted from year to year; (b) who receives those funds and how much is passed along to other groups or individuals; (c) how many unique clients are served in a year; (d) what measurable quantity of products and services each of those clients receive; (e) whether the nonprofits are appropriately audited; and (f) whether audits are reviewed to ensure that state funds are spent in accordance with grant guidelines and protocols. In states that do not fund UPCs, it is unclear whether complaints have been filed against them, what complaints allege, what investigations state agencies have initiated, and whether state actions were taken.

The Freedom of Information Act (FOIA) or Public Records Act (PRA) can provide answers. State law allows members of the public to obtain most government-held documents, including electronic files of all kinds. In about 40 states, there are nonprofit organizations that will help individuals and organizations navigate the FOIA or PRA system.¹⁴²

To make requests more successful, be specific. In the case of UPCs, your request should name all the individual UPCs that you are aware of. Both electronic and hard-copy documents are most easily found by searching for a specific name.

To make requests more successful, limit the dates. You need to limit the request to a specific period of time, for example, the past three calendar years. If you ask for too much, you may be overwhelmed by the volume of documents and the fees for producing them.

Legislators and advocacy groups need information to create rational state policy. The UPC industry is opaque. The American Medical Association urges: “the development of effective oversight for entities offering pregnancy-related health services and counseling.” The first step is transparency. That’s not too much to ask.

Public Right to Know (Model FOIA or Public Records Letter)

Summary: The Public Right to Know Model FOIA or Public Records Letter is a model for demanding information about UPCs under existing state law.

NOTE: Please understand that most state FOIA or public records laws only allow you to obtain copies of existing documents, including electronic files of all kinds. The law does not require an agency to create any new document. Also remember, you do not have to ask for all possible documents at once. You can see how the process goes and make another request later.

In states that never funded UPCs, a public records request may turn up valuable documents like complaints, investigations and enforcement actions involving UPCs.

In states that currently fund UPCs, a request should probably be limited to a three-year period in order to increase compliance and lower costs.

In states that previously funded UPCs but no longer do (E.g., AZ, MI, PA), a request should probably seek financial information for the last three years of grant funding.

Many states are likely to charge search or copying fees for such requests. These are usually modest amounts, but if this worries your organization, you might want to line up a funder ahead of time who will pay the fees.

Address of Agency

City, State, Zip Code

Re: Freedom of Information Act/Public Records Request

Dear _____:

This is a request for copies of records pursuant to the (cite state law).

For purposes of this records request, “documents” include any written matter such as correspondence, reports, contracts, memos, invoices, meeting minutes, legal documents, articles, and any other form of recorded words or numbers that convey information,

including spreadsheets, databases, and audio and video files. Documents can be handwritten, typed, printed, digital files, or a combination of these formats.

For purposes of this request, "correspondence" means any form of communication including, without limitation, emails, letters, texts, audio or video messages, regardless of whether the correspondence was sent or received by your agency.

For purposes of this request, "UPC" [or use another name if it's common for your state] means any of the following organizations [list all the UPCs in your state].

This request is limited to documents received, created, edited or altered between January 1, 20XX and December 31, 20XX.

Request Description: Please provide all documents that are:

1. Proposals for funding from a UPC, including any budgets or other attachments to a proposal.
2. Reports of activities by a UPC, including any final report required by statute, regulations or terms of a funding agreement.
3. Correspondence between your agency and a UPC.
4. Documents relating to communications or meetings with any employees, representatives or agents of a UPC.
5. Documents relating to communications within your agency about a UPC.
6. Documents relating to complaints from anyone about a UPC.
7. Documents relating to investigations undertaken as a result of any complaints about a UPC.
8. Documents relating to enforcement or corrective actions taken as a result of any complaints about a UPC.

This request is made in the public interest. It is essential for the public and for legislators to know this information. Given this public interest motivation, I request the waiver of any fees.

Records may be produced in electronic format and emailed to me. Please contact me if we need to arrange an alternative method of delivery.

Model Bills: Privacy Protections

10. Reproductive Health Client Data Privacy Act

Issue Overview

Unregulated Pregnancy Clinics (UPCs) often present themselves as free medical clinics to mislead clients seeking abortion. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.¹⁴³ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even, at times, as abortion providers.^{144,145} Inside, they often resemble medical offices, with waiting rooms and exam rooms outfitted with medical equipment, and staff in lab coats and scrubs. Clients must often fill out intake forms that ask for private health information.¹⁴⁶

Presenting themselves as conventional medical providers, many UPCs solicit and document a great deal of sensitive personal data and private health information. UPCs collect and retain client information in various ways, including on appointment request forms and intake forms completed on premises, reports of interviews before and after testing, written results of STI/STD tests or ultrasound examinations, write-ups from counseling sessions, and via centralized chat services and online client data management platforms.^{147,148}

UPC intake forms are often invasive. Even though they are not medical providers, many UPCs ask clients for prescription drug lists, past or current illnesses, and medical conditions unrelated to their services. Some ask inappropriate questions like the name or age of the person who impregnated the client, whether the client is living with someone they aren't married to, when they first had sex, or whether they have multiple partners or same-sex partners. Collecting such information is unnecessary and unethical, given that most UPCs only provide over-the-counter pregnancy tests, STD/STI tests without treatment, lay counseling, and material resources like diapers and wipes. Further, even though they don't bill insurance, UPCs often ask for clients' government identification documents, insurance information, income, employer, or eligibility for public assistance.¹⁴⁹

Because the vast majority of UPCs are not medical clinics, they can and do violate clients' privacy. Traditional medical clinics must follow the privacy, confidentiality, and records security requirements of the Health Insurance Portability and Accountability Act (HIPAA). UPCs are not subject to HIPAA¹⁵⁰ and, therefore, are not required to protect clients' private health information. On the contrary, many UPCs maintain client records in online databases accessible by third parties outside the UPC.¹⁵¹ A digital system called eKYROS feeds personal client information into a central database linked with the national

UPC umbrella groups Heartbeat International and Care Net.¹⁵² Other central databases used by UPCs include Next Level¹⁵³ and CoolFocus.¹⁵⁴

The national UPC umbrella organizations collect client records in “digital dossiers” on pregnant people around the country who have contacted or visited a UPC. As a brief by the Alliance reports: “the CPC industry is now functioning as surveillance infrastructure for the anti-abortion movement, amassing data that could be used in pregnancy- and abortion-related prosecutions....”¹⁵⁵ The global anti-abortion group Heartbeat International reports using this data to create “digital dossiers”, stating ‘Big data is revolutionizing all sorts of industries. Why shouldn’t it do the same for a critical ministry like ours?’”¹⁵⁶

Many states have laws requiring medical privacy and security, and the UPC industry should be subject to such laws. According to a 50-State Survey of Health Care Information Privacy Laws, most states have privacy laws that cover at least some medical facilities.¹⁵⁷ Similarly, the American Health Lawyers Association explains, “Most states have enacted laws and regulations related to the privacy and confidentiality of individuals’ health information. Such regulations are usually set forth in facility and/or professional licensure laws, requiring both licensed health care facilities and licensed health care professionals to maintain the privacy and confidentiality of patients’ health information.”¹⁵⁸ Such laws should be enacted or amended to cover UPCs.

Reproductive Health Client Data Privacy Act

Summary: The Reproductive Health Client Data Privacy Act prohibits Unregulated Pregnancy Clinics from disclosing personally-identifiable and private health information to any other entity without the consent of the client.

[BILL DRAFTING NOTE: This bill uses a unique definition of “Unregulated Pregnancy Clinic” which fits the needs of this particular legislation. Please work with local advocates to decide if this name works best for you and your state.]

SECTION 1. SHORT TITLE

This Act shall be called the “Reproductive Health Client Data Privacy Act.”

SECTION 2. FINDINGS

The legislature finds that:

1. When clients go to any health care facility, they expect their sensitive personal health information to be kept confidential and the records and communications are kept secure from third parties, unless they explicitly give consent to sharing the information.
2. When hospitals, medical clinics and physicians operating in the regulated health marketplace solicit and record patients’ health information, they are required by federal law to keep that information confidential pursuant to the Health Insurance Portability and Accountability Act (HIPAA). HIPAA also requires that private health information, as well as all communications with patients, be kept secure against breaches by third parties.
3. Unregulated Pregnancy Clinics that do not engage in transactions regulated by HIPAA, such as the electronic transfer of client data for the purpose of billing for services, billing health insurance and referrals, are not subject to HIPAA and, therefore, are not legally required to maintain the privacy or security of clients’ health information.
4. Many Unregulated Pregnancy Clinics collect personal health information from their clients, including medical histories, the results of medical tests, and communications with clients about health issues. Many Unregulated Pregnancy Clinics also maintain client records in online databases that are accessible by third parties outside of the center.
5. The State must ensure that health information is kept confidential unless individuals providing the information expressly agree to a disclosure.

SECTION 3. PRIVACY FOR CLIENTS OF UNREGULATED PREGNANCY CLINICS

After section XXX, the following new section XXX shall be inserted:

(A) DEFINITIONS—In this section:

“Unregulated Pregnancy Clinic” means a facility primarily offering determination of pregnancy and pregnancy counseling but is not a “covered entity” under the federal Health Insurance Portability and Accountability Act (HIPAA), 42 USC Sec. 1320d et al. and 45 CFR Parts 160 and 164.

(B) PRIVACY OF RECORDS REQUIRED

1. An Unregulated Pregnancy Clinic shall not disclose to any entity or individual a client’s name or any protected health information that could reasonably be linked with an individual client, without written permission of the client for that specific disclosure of information.
2. Prior to obtaining written permission for the disclosure of information, the Unregulated Pregnancy Clinic shall provide the client with a clear and understandable privacy notice, including:
 - (a) the specific purpose for disclosing the information to a third party;
 - (b) the specific types of information to be disclosed; and
 - (c) the third parties who might or will receive the information.
3. An Unregulated Pregnancy Clinic shall provide a simple mechanism for a client to revoke any consent for the disclosure of information.
4. Within 10 business days of a client’s request, an Unregulated Pregnancy Clinic shall provide to a client, without charge, a copy of all of that client’s records possessed by the center.
5. This section does not prohibit an Unregulated Pregnancy Clinic from disclosures that maintain the confidentiality of individual clients’ personal information, such as the numbers of clients who have been provided with particular goods or services.
6. Nothing in this section shall be construed to restrict an Unregulated Pregnancy Clinic’s ability to:
 - (a) comply with federal, state or local laws, rules or regulations;

- (b) comply with lawful civil, criminal or regulatory inquiries; or
- (c) defend itself against legal claims.

(C) SECURITY OF CLIENT HEALTH INFORMATION REQUIRED

1. An Unregulated Pregnancy Clinic shall:

- (a) Protect clients' health information by using data security protocols as effective as those required by the federal Health Insurance Portability and Accountability Act (HIPAA);
- (b) Protect against any reasonably anticipated threats or hazards to, or prohibited uses of, such information; and
- (c) Ensure compliance by its workforce.

2. Unregulated Pregnancy Clinics that receive client information by way of electronic communication, including but not limited to phone calls, emails, text messages, instant messages, chat room, and video or voice calls conducted via internet-based platforms, shall utilize an encryption system, meaning an algorithmic platform to transform data into a form in which there is a low probability of assigning meaning without use of a confidential process or key.

(D) ENFORCEMENT

1. Whenever the Attorney General or a district attorney [if applicable: a city attorney, a county counsel] has reasonable cause to believe that an Unregulated Pregnancy Clinic has violated this section, the Attorney General may issue a civil investigative demand pursuant to [cite code].
2. The Attorney General may commence an action in any court of competent jurisdiction for injunctive relief to compel compliance with the provisions of this section, and for civil penalties for violations.
3. Prior to commencing an action in court, the Attorney General shall give written notice to the Unregulated Pregnancy Clinic to cure such violations not later than 10 business days after receipt of the written notice.
4. Upon a finding by the court that an Unregulated Pregnancy Clinic has violated this section, the state shall be entitled to recover:

- (a) civil penalties of up to three thousand dollars for a first violation;
- (b) civil penalties of up to ten thousand dollars for a second or subsequent violation; and
- (c) reasonable attorneys' fees and costs.

5. In determining the overall amount of civil penalties to assess against an Unregulated Pregnancy Clinic, the court shall include, but not be limited to the following in its consideration:

- (a) the nature and severity of the violation;
- (b) the size, scope, and type of the offending organization; and
- (c) the good faith cooperation of the offending organization with any investigations conducted by the Attorney General pursuant to this section.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

11. Right to Dignified Care Act

Issue Overview

Unregulated Pregnancy Clinics (UPCs) often present themselves as free medical clinics to mislead clients seeking abortion. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.¹⁵⁹ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even, at times, as abortion providers.^{160,161} Inside, they often resemble medical offices, with waiting rooms and exam rooms outfitted with medical equipment, and staff in lab coats and scrubs. Clients must often fill out intake forms that ask for private health information.¹⁶²

UPC intake forms are often invasive. Even though they are not medical providers, many UPCs ask for prescription drug lists, past or current illnesses, and medical conditions unrelated to their services. Some ask inappropriate questions like the name or age of the person who impregnated the client, whether the client is living with someone they aren't married to, when they first had sex, or whether they have multiple partners or same-sex partners. Collecting such information is unnecessary and unethical, given that most UPCs only provide over-the-counter pregnancy tests, STD/STI tests without treatment, lay counseling, and material resources like diapers and wipes. Further, even though they don't bill insurance, UPCs often ask for clients' government identification documents, insurance information, income, employer, or eligibility for public assistance.¹⁶³

Because the vast majority of UPCs are not medical clinics, they can and do violate clients' privacy. Traditional medical clinics must follow the privacy, confidentiality, and records security requirements of the Health Insurance Portability and Accountability Act (HIPAA). UPCs are not subject to HIPAA and, therefore, are not required to protect clients' private health information.¹⁶⁴

Many UPCs maintain client records in online databases accessible by third parties outside the UPC.¹⁶⁵ A digital system called eKYROS feeds personal client information into a central database linked with the national UPC umbrella groups Heartbeat International and Care Net.¹⁶⁶ Other central databases used by UPCs include Next Level¹⁶⁷ and CoolFocus.¹⁶⁸

The national UPC umbrella organizations collect these records to amass “digital dossiers” on clients that could be used in pregnancy-related prosecutions. As a brief by the Alliance reports: “the CPC industry is now functioning as surveillance infrastructure for the anti-abortion movement, amassing data that could be used in pregnancy- and abortion-related prosecutions....”¹⁶⁹ The global anti-abortion group Heartbeat International, for

example, stores “digital dossiers” on clients, stating “Big data is revolutionizing all sorts of industries. Why shouldn’t it do the same for a critical ministry like ours?”¹⁷⁰

Our state must regulate UPCs. The American Medical Association “urges the development of effective oversight for entities offering pregnancy-related health services and counseling.”¹⁷¹ The American College of Obstetricians and Gynecologists says that policymakers should hold UPCs “accountable for deceptive practices by, for example, enforcing and strengthening consumer protection laws against false and misleading advertising, investigating the pervasiveness and impact of deceptive practices on patients, and partnering across the public and private sectors to ensure transparency.”¹⁷² They are right.

Right to Dignified Care Act

Summary: The Right to Dignified Care Act prohibits an Unregulated Pregnancy Clinic from asking improper and intrusive questions as a condition of receiving products or services.

[NOTE: This could be a budget amendment in a state that funds UPCs.]

SECTION 1. SHORT TITLE

This Act shall be called the “Right to Dignified Care Act.”

SECTION 2. FINDINGS

The legislature finds that:

1. Unregulated Pregnancy Clinics (UPCs) [or whatever name your state uses], also known as “crisis pregnancy centers,” are facilities that represent themselves as offering unbiased reproductive health care information and services but are primarily intended to prevent clients from seeking or accessing abortions.
2. UPCs commonly ask clients to fill out a form, designed to look like a medical intake form, prior to receiving any products or services. As one UPC explains on its website, “We will give you an intake form similar to what you might fill out at a doctor’s office.”¹⁷³
3. But a UPC is not a traditional doctor’s office. For that reason, it is improper and unreasonably intrusive for UPCs to ask certain questions on an intake form.
4. UPCs primarily seek out or advertise to attract clients who are young and unfamiliar with health care standards, have lower incomes, and are in vulnerable situations, so these clients may be unaware that some questions are only reasonable if asked by a licensed medical provider and others are unreasonable for a medical intake form under any circumstances.
5. UPCs are not required to follow the privacy, confidentiality and records security requirements of the Health Insurance Portability and Accountability Act (HIPAA). Nevertheless, many UPCs give clients a sense of security by falsely claiming that they are subject to HIPAA or “HIPAA compliant.”¹⁷⁴
6. There is a strong need for legislation. Every one of the topics listed in Section (3)(B) is actually asked on intake forms at some UPCs.
7. Certainly, the staff at any nonprofits have a right to ask questions; that is not the issue here. The issue is that, by masquerading as a medical clinic, some UPCs are tricking clients

into believing that they must divulge very sensitive information in order to obtain medical services. It is like a phishing scheme.

SECTION 3. RESTRICTIONS ON HEALTH CARE INTAKE FORMS

After section XXX, the following new section XXX shall be inserted:

(A) DEFINITIONS—In this section:

1. “Chief medical officer” means a physician licensed under [cite code], a physician assistant under [cite code], or an advanced practice nurse under [cite code], who oversees the daily medical operations of a medical facility and is practicing within the provider’s scope of practice.
2. “Unregulated Pregnancy Clinic” means a facility primarily offering determination of pregnancy and pregnancy counseling that does not have one or more chief medical officers on staff or under contract who provide or directly supervise, in person, the provision of all of the services provided at the facility. [NOTE: Many states have laws or regulations that define “direct supervision.” Ask your in-state advocates and bill drafters to ensure that the legislation uses language that fits your state.]

(B) PROHIBITED INTAKE QUESTIONS

1. An Unregulated Pregnancy Clinic shall not make it a condition of service, or make it reasonably appear to be a condition of service, that a client must disclose any of the following information:
 - (a) A list of the prescription drugs the client takes;
 - (b) A list of the client’s current or past illnesses;
 - (c) A list of the client’s medical conditions that are not directly relevant to a determination of pregnancy;
 - (d) The name or age of the potential baby’s father;
 - (e) Whether the client is living with a man to whom she is not married;
 - (f) The client’s age when she first became sexually active;
 - (g) Whether the client is currently sexually active with one or more than one partner;
 - (h) Whether the client engages in homosexual relationships; or

(i) For a site that does not bill insurance or is an official Medicaid or WIC enrollment site, the client's income, employer, or eligibility for public assistance.

2. The Attorney General may promulgate regulations to clarify which intake questions are overly intrusive and whether a facility is making answers to overly intrusive questions a condition of service, or it reasonably appears to make them a condition of service.

(C) ENFORCEMENT

1. Whenever the Attorney General or a district attorney [if applicable: a city attorney, a county counsel] has reasonable cause to believe that an Unregulated Pregnancy Clinic has violated this section, the Attorney General may issue a civil investigative demand pursuant to [cite code].

2. The Attorney General may commence an action in any court of competent jurisdiction for injunctive relief to compel compliance with the provisions of this section, and for civil penalties for violations.

3. Prior to commencing an action in court, the Attorney General shall give written notice to the Unregulated Pregnancy Clinic to cure such violations not later than 10 business days after receipt of the written notice.

4. Upon a finding by the court that an Unregulated Pregnancy Clinic has violated this section, the state shall be entitled to recover:

(a) civil penalties of up to three thousand dollars for a first violation;

(b) civil penalties of up to ten thousand dollars for a second or subsequent violation; and

(c) reasonable attorneys' fees and costs.

5. In determining the overall amount of civil penalties to assess against an Unregulated Pregnancy Clinic, the court shall include, but not be limited to the following in its consideration:

(a) the nature and severity of the violation;

(b) the size, scope, and type of the offending organization; and

(c) the good faith cooperation of the offending organization with any investigations conducted by the Attorney General pursuant to this section.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

12. Religious Freedom in Reproductive Health Act

Issue Overview

The Unregulated Pregnancy Clinic (UPC) industry is large and widespread. More than 2,600 pregnancy centers operate in all 50 states,¹⁷⁵ most of which affiliate with one or more of three national organizations: Care Net, Heartbeat International, and National Institute of Family and Life Advocates (NIFLA).

Over the past three years, [State] has granted \$XXXX to pregnancy centers. XX pregnancy centers operate in [State], and XX has received funding from the state. However, there is little transparency in the grant reporting or accounting process.

Overwhelmingly, [insert what the state calls UPCs] are religion-based nonprofits or subsidiaries of a church. The umbrella groups that help direct the programming for these centers – Care Net, Heartbeat International, and National Institute of Family and Life Advocates (NIFLA) – are Christian organizations. Religious organizations may provide medical or social programs in [State], as long as they don't violate their clients' rights to freedom of religion.

Some [insert what the state calls UPCs] require participation in religious programming. Specifically, some condition the provision of services or material resources like diapers, packs of baby wipes, baby clothing outfits, car seats, strollers, cribs, or containers of baby formula on a requirement that clients attend classes or other center programming with religious content.¹⁷⁶

[State] is dedicated to religious freedom, which, by definition, means the state will not compel religious participation. Compelling clients to attend or participate in religious instruction is not a proper use of state funds.

Taxpayer dollars should not be wasted or misallocated. The legislature and the state administration have an obligation to ensure that funds granted to any nonprofit are spent efficiently and effectively. The American Medical Association urges that: "public funding only support programs that provide complete, non-directive, medically accurate health information to support patients' informed, voluntary decisions."¹⁷⁷

Religious Freedom in Reproductive Health Act

Summary: The Religious Freedom in Reproductive Health Act requires that, in order to receive grants from the state, a [Insert what the state calls a Unregulated Pregnancy Clinic] cannot condition the receipt of any services or products on the client attending religious meetings or watching religious videos.

[BILL DRAFTING NOTE: This might be a bill or a budget amendment.]

SECTION 1. SHORT TITLE

This Act shall be called the “Religious Freedom in Reproductive Health Act.”

SECTION 2. FINDINGS

The legislature finds that:

1. [Insert what the state calls UPCs], also known as “crisis pregnancy centers,” operate in all 50 states, the vast majority of which are affiliated with one or more of three national organizations: Care Net, Heartbeat International and National Institute of Family and Life Advocates (NIFLA).
2. Nationally, there are an estimated 2,750 of these facilities and, between 2019 and 2022 alone, that industry received over \$5.6 billion in revenue, spent over \$4.9 billion in expenses, and held \$2.3 billion in assets.
3. Overwhelmingly, [insert what the state calls UPCs] are religion-based nonprofits. Religious organizations may be program providers in [State], as long as they don’t violate their clients’ rights to freedom of religion.
4. While many [insert what the state calls UPCs] do not overtly push religious instruction as part of their programs, some do. Specifically, some condition the provision of pregnancy tests, ultrasounds, STD/STI tests, pregnancy counseling, student sexual risk education, parenting education, or the provisions of diapers, packs of baby wipes, baby clothing outfits, car seats, strollers, cribs, or containers of baby formula on a requirement that clients attend classes or watch videos that include religious instruction.
5. Compelling clients to attend or participate in religious instruction is not a proper use of state funds.

SECTION 3. FREEDOM OF RELIGION IN THE USE OF GRANT FUNDS

After section XXX, the following new section XXX shall be inserted:

1. A [insert what the state calls CPCs] shall not qualify for a state grant under any program if the grantee conditions a client's receipt of any services or products on a requirement that clients attend classes or watch videos that include religious instruction.
2. Any grantee that fails to comply with the requirement in this subsection shall be prohibited from applying for any state funding for a six-month period beginning the day after the last instance of noncompliance.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

Model Bills: Deceptive Practices

13. Preventing False Advertising in Reproductive Services Act

Issue Overview

Unregulated Pregnancy Clinics often present themselves as free medical clinics to mislead clients seeking abortion. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.¹⁷⁸ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even, at times, as abortion providers.^{179,180} Inside, they often resemble medical offices, with waiting rooms and exam rooms outfitted with medical equipment, and staff in lab coats and scrubs. Clients must often fill out intake forms that ask for private health information.¹⁸¹

The vast majority of UPCs advertise medical or quasi-medical services. Nearly all offer free pregnancy tests¹⁸² readily available at any pharmacy. Between one-quarter¹⁸³ and one-half¹⁸⁴ advertise free STD/STI tests and approximately three-quarters advertise free ultrasounds,¹⁸⁵ typically performed by someone presenting as a medical professional.

Advertising ultrasound testing by UPCs is unethical. UPCs do not perform diagnostic ultrasounds from which medical conclusions can be drawn. They call them “limited” ultrasounds,¹⁸⁶ which is little more than showing pictures of the uterus, hoping to emotionally influence clients to continue the pregnancy. UPCs are using medical equipment unethically,¹⁸⁷ and even one of the three major UPC umbrella groups, Care Net, truthfully answers “Can we just do ultrasounds without becoming a medical clinic?” with the answer, “Absolutely not. The use of ultrasound energy in any form is considered the practice of medicine.”¹⁸⁸ [If your state requires women to have an ultrasound before accessing abortion care, many UPCs have been falsely presenting their ultrasound services as meeting this requirement.¹⁸⁹ Their “limited ultrasounds” do not.

Mobile UPCs are deceptively designed to look like conventional medical facilities.¹⁹⁰ As ICU Mobile, “A Ministry Division of Care Net,” concedes: “ICU Mobile units are neutrally-branded and medically designed. By having this independent brand, we break down the barriers that may prevent abortion-minded women from coming on board...”¹⁹¹ Another set of mobile UPC trucks, from Save the Storks, have painted on the sides: “Women’s Choice Center,” “Pregnancy Testing & Ultrasound,” and “mobile medical unit.”¹⁹²

UPCs lack medical oversight and standards, exposing people to risk. Some UPCs have off-site doctors listed as medical directors or employ onsite RNs or LPNs, but they do not diagnose medical conditions, write prescriptions, or refer people for treatment. Because they are overwhelmingly not regulated as conventional medical clinics, they are not required to follow standards of care on client confidentiality, medical accuracy, or sanitation.¹⁹³

Clients seeking pregnancy services need honest and nonjudgmental medical services.

The American Medical Association “advocates that any entity offering crisis pregnancy services...truthfully describe the services they offer or for which they refer—including prenatal care, family planning, termination, or adoption services—in communications on site and in their advertising, and before any services are provided to an individual patient.”¹⁹⁴ They are right.

Preventing False Advertising in Reproductive Services Act

Summary: The Preventing False Advertising in Reproductive Services Act prohibits Unregulated Pregnancy Clinics (UPCs) [or use another name if it's common for your state] from disseminating false advertising about their services.

[BILL DRAFTING NOTE: States have different regulatory schemes and may have a different name for UPCs, so please work with local advocates to decide the best way to name and define them in your state legislation.]

Based on [VT SB 37 \(2023\)](#)

SECTION 1. SHORT TITLE

This Act shall be called the “Preventing False Advertising in Reproductive Services Act.”

SECTION 2. FINDINGS

The legislature finds that:

1. Most Unregulated Pregnancy Clinics (UPCs) are facilities primarily intended to prevent women from seeking abortions. Such UPCs have the constitutional right to speak out against abortion.
2. However, most such UPCs present themselves to potential clients as if they were unbiased medical clinics, or even abortion clinics, providing a wide range of reproductive and maternal health services. This presentation is fraudulent.
3. Fraud against consumers is already prohibited under [cite the state law]. However, the existing statute does not provide protection against fraud by UPCs because they do not usually charge or bill insurance for their services.
4. Because of the significant health impacts of pregnancy, it is vital for clients to access early medical care to confirm pregnancy, gestational age, identify ectopic pregnancy, fetal anomaly, issues with the placenta or amniotic fluid, and any factors that could make the pregnancy high risk or dangerous. Early medical care may also be important for the health of the fetus. False and misleading advertising about the services offered by UPCs can delay the search for comprehensive prenatal care or for treatment for potentially life-threatening medical conditions.
5. After carefully balancing the reproductive rights of clients, the right of individuals to express their religious and ethical beliefs about abortion, the harm to clients caused by even

slight delays that are a result of false advertising for pregnancy or abortion services, and the cost to the government that can accrue from such delay, it is clear that there exists a need to regulate false and misleading advertising by UPCs.

SECTION 3. FRAUD PREVENTION

After section XXX, the following new section XXX shall be inserted:

(A) DEFINITIONS—In this section:

1. “Chief medical officer” means a physician licensed under [cite code], a physician assistant under [cite code], or an advanced practice nurse under [cite code], who oversees the daily medical operations of a medical facility and is practicing within the provider’s scope of practice.
2. “Unregulated Pregnancy Clinic” means a facility primarily offering determination of pregnancy and pregnancy counseling that does not have one or more chief medical officers on staff or under contract who provide or directly supervise, in person, the provision of all of the services provided at the facility. [NOTE: Many states have laws or regulations that define “direct supervision.” Ask your in-state advocates and bill drafters to ensure that the legislation uses language that fits your state.]

(B) UNLAWFUL FRAUD BY AN UNREGULATED PREGNANCY CLINIC

1. It is an unfair and deceptive act and practice in commerce and a violation of section [cite the consumer fraud section] of this title for any Unregulated Pregnancy Clinic to disseminate or cause to be disseminated to the public any advertising about the services or proposed services performed at that center that is untrue or clearly designed to mislead the public about the nature of services provided.
2. Such advertising includes representations made directly to consumers; marketing practices; communication in any print medium, such as newspapers, magazines, mailers, or handouts; and any broadcast medium, such as television or radio, telephone marketing, or advertising over the Internet such as through social media, websites and web ads.
3. For purposes of this section, advertising or the provision of services by an Unregulated Pregnancy Clinic is an act in commerce.

(C) ENFORCEMENT

1. Whenever the Attorney General or a district attorney [if applicable: a city attorney, a county counsel] has reasonable cause to believe that an Unregulated Pregnancy Clinic has

violated this section, the Attorney General may issue a civil investigative demand pursuant to [cite code].

2. The Attorney General may commence an action in any court of competent jurisdiction for injunctive relief to compel compliance with the provisions of this section, and for civil penalties for violations.

3. Prior to commencing an action in court, the Attorney General shall give written notice to the Unregulated Pregnancy Clinic to cure such violations not later than 10 business days after receipt of the written notice.

4. Upon a finding by the court that an Unregulated Pregnancy Clinic has violated this section, the state shall be entitled to recover:

- (a) civil penalties of up to three thousand dollars for a first violation;
- (b) civil penalties of up to ten thousand dollars for a second or subsequent violation; and
- (c) reasonable attorneys' fees and costs.

5. In determining the overall amount of civil penalties to assess against an Unregulated Pregnancy Clinic, the court shall include, but not be limited to the following in its consideration:

- (a) the nature and severity of the violation;
- (b) the size, scope, and type of the offending organization; and
- (c) the good faith cooperation of the offending organization with any investigations conducted by the Attorney General pursuant to this section.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

14. False Advertising in Health Care Act

Issue Overview

The arguments for this model bill are the same as those for the model above.

This legislation is different, however, because it is not limited to UPCs; it applies to false advertising by any health care services entity. That makes the legislation more defensible in court, which is why Vermont amended its law from the version above, enacted in 2023, to the version below, enacted in 2025.

While it may seem like a significant change in scope, most states already have laws against fraudulent advertising that apply to enterprises that charge for their products or services, including health care providers. So the real effect of this model is limited, extending false advertising prohibitions to include free health care entities, such as UPCs.

False Advertising in Health Care Act

Summary: The False Advertising in Health Care Act prohibits health care providers from disseminating false advertising about their services.

Based on [VT SB 28 \(2025\)](#)

SECTION 1. SHORT TITLE

This Act shall be called the “False Advertising in Health Care Act.”

SECTION 2. FINDINGS

The legislature finds that:

1. Providing evidence-based and science-backed information is how trained health care providers demonstrate respect for patients, foster trust, promote self-determination, and cultivate an environment where best practices in shared decision-making can flourish. Without veracity in information and communication, it is difficult for individuals to make informed, voluntary choices that are essential to one’s sense of personal agency and autonomy.
2. Advertising strategies and educational information about health care options that lack transparency, use misleading or ambiguous terminology, misrepresent or obfuscate services provided, or provide factually inaccurate information are a form of manipulation that disrespects individuals, undermines trust, broadens health disparity, and can result in harm to clients.

SECTION 3. PREVENTION OF FALSE ADVERTISING

After section XXX, the following new section XXX shall be inserted:

(A) DEFINITIONS—In this section:

“Health care services” means all supplies, care, and services of a medical, dental, behavioral health, mental health, substance use disorder treatment, surgical, psychiatric, therapeutic, diagnostic, preventative, rehabilitative, or supportive nature, including medication.

(B) UNFAIR AND DECEPTIVE ACT

1. It is an unfair and deceptive act and practice in commerce and a violation of section [cite the consumer fraud section] of this title for any person to disseminate or cause to be disseminated to the public any advertising about health care services or proposed services

performed in this State that is untrue or clearly designed to mislead the public about the nature of the services provided.

2. Such advertising includes representations made directly to consumers; marketing practices; communication in any print medium, such as newspapers, magazines, mailers, or handouts; and any broadcast medium, such as television or radio, telephone marketing, or advertising over the Internet such as through social media, websites and web advertisements.

3. For purposes of this section, advertising about health care services is an act in commerce.

(C) ENFORCEMENT

1. Whenever the Attorney General or a district attorney [if applicable: a city attorney, a county counsel] has reasonable cause to believe that an Unregulated Pregnancy Clinic has violated this section, the Attorney General may issue a civil investigative demand pursuant to [cite code].

2. The Attorney General may commence an action in any court of competent jurisdiction for injunctive relief to compel compliance with the provisions of this section, and for civil penalties for violations.

3. Prior to commencing an action in court, the Attorney General shall give written notice to the Unregulated Pregnancy Clinic to cure such violations not later than 10 business days after receipt of the written notice.

4. Upon a finding by the court that an Unregulated Pregnancy Clinic has violated this section, the state shall be entitled to recover:

(a) civil penalties of up to three thousand dollars for a first violation;

(b) civil penalties of up to ten thousand dollars for a second or subsequent violation; and

(c) reasonable attorneys' fees and costs.

5. In determining the overall amount of civil penalties to assess against an Unregulated Pregnancy Clinic, the court shall include, but not be limited to the following in its consideration:

(a) the nature and severity of the violation;

(b) the size, scope, and type of the offending organization; and

(c) the good faith cooperation of the offending organization with any investigations conducted by the Attorney General pursuant to this section.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

15. Public Health Integrity Act

Issue Overview

The Unregulated Pregnancy Clinic (UPC) industry is large and widespread. More than 2,600 pregnancy centers operate in all 50 states,¹⁹⁵ most of which affiliate with one or more of three national organizations: Care Net, Heartbeat International, and National Institute of Family and Life Advocates (NIFLA).

Over the past three years, [State] has granted \$XXXX to pregnancy centers. XX pregnancy centers operate in [State], and XX has received funding from the state.

Pregnancy centers [use your state's term] present themselves as free medical clinics to mislead clients seeking abortion. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.¹⁹⁶ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even, at times, as abortion providers.^{197,198} Inside, they often resemble medical offices, with waiting rooms and exam rooms outfitted with medical equipment, and staff in lab coats and scrubs.¹⁹⁹ Clients must often fill out intake forms that ask for private health information.²⁰⁰

The vast majority of UPCs advertise medical or quasi-medical services. Nearly all offer free pregnancy tests²⁰¹ readily available at any pharmacy. Between one-quarter²⁰² and one-half²⁰³ advertise free STD/STI tests, and approximately three-quarters advertise free ultrasounds,²⁰⁴ typically performed by someone presenting as a medical professional.

UPC's use of ultrasound machines is unethical. UPCs do not perform diagnostic ultrasounds that address medical issues. Instead, they offer so-called "limited" or "non-diagnostic" ultrasounds, intended to show pictures of the uterus they hope will dissuade clients from seeking an abortion. This is a misuse of medical equipment²⁰⁵; one of the three major UPC umbrella groups, Care Net, admits as much when it truthfully answers "Can we just do ultrasounds without becoming a medical clinic?" with the answer, "Absolutely not. The use of ultrasound energy in any form is considered the practice of medicine."²⁰⁶

Mobile UPCs are intentionally designed to look like conventional medical facilities.²⁰⁷ As ICU Mobile, "A Ministry Division of Care Net," concedes: "ICU Mobile units are neutrally branded and medically designed. By having this independent brand, we break down the barriers that may prevent abortion-minded women from coming on board..."²⁰⁸ Another set of mobile UPC trucks, from Save the Storks, have painted on the sides: "Women's Choice Center," "Pregnancy Testing & Ultrasound," and "mobile medical unit."²⁰⁹

Clients seeking pregnancy services need factual medical advice. The American Medical Association “advocates that any entity offering crisis pregnancy services...truthfully describe the services they offer or for which they refer—including prenatal care, family planning, termination, or adoption services—in communications on site and in their advertising, and before any services are provided to an individual patient.”²¹⁰

Pregnancy centers commonly tell these five medical lies:

1) That having an abortion raises the risk of developing breast cancer. However, the American Cancer Society,²¹¹ the National Cancer Institute,²¹² and the American College of Obstetricians and Gynecologists²¹³ have flatly refuted this claim.

2) That having an abortion raises the risk of infertility. A study published by the National Institutes of Health found that “there is no association between abortion and secondary infertility.”²¹⁴ A Guttmacher Institute survey of scientific studies found that abortion poses “virtually no long-term risks of future fertility-related problems such as infertility...”²¹⁵ The American College of Obstetricians and Gynecologists also shares that position.²¹⁶

3) That having an abortion raises the risk of negative emotional or mental health problems or increases the risk of suicidal ideation. An American Psychological Association Task Force²¹⁷ and a comprehensive New England Journal of Medicine study²¹⁸ found no such evidence. A study published by the National Institutes of Health concluded that abortion is: “not a statistically significant predictor of subsequent anxiety, mood, impulse-control, and eating disorders or suicidal ideation.”²¹⁹

4) That medication abortion poses greater risks than other common prescription drugs or than childbirth. In fact, an analysis of U.S. Food and Drug Administration data found that mifepristone is four times safer than penicillin, ten times safer than Viagra, and more than four times safer than childbirth. Further, a two-drug medication abortion using both mifepristone and misoprostol is even safer.²²⁰

5) That an abortion procedure poses greater health risks than other common medical procedures or than childbirth. In fact, “the risk of complication or mortality from abortion is less than the same risk from common procedures like wisdom tooth removal, cancer-screening colonoscopy, and plastic surgery,” according to the American College of Obstetricians and Gynecologists.²²¹ An analysis of U.S. Food and Drug Administration data found that an abortion procedure is three times safer than taking penicillin, seven times safer than taking Viagra, and three times safer than childbirth.²²² A study based on data from the Centers for Disease Control found that

the “risk of death associated with childbirth is approximately 14 times higher than that with abortion.”²²³

Public Health Integrity Act

Summary: No private organization that holds itself out as a medical clinic shall receive state funding if it promotes any of those medical falsehoods.

[BILL DRAFTING NOTE: This could be a bill or a budget amendment. Further, it doesn't matter how many medical lies your bill highlights. The first two or three are the easiest to prove, so you might use only those. The point is to challenge opponents to defend their indefensible lies and publicize this truth-versus-lies debate.]

SECTION 1. SHORT TITLE

This Act shall be called the "Truth in Reproductive Health Act."

SECTION 2. FINDINGS

The legislature finds that:

1. Individuals and organizations have the right to lie about abortion; they are welcome to say whatever they like.
2. However, if organizations receive state funding and represent themselves as medical providers, it is necessary and appropriate to require them to refrain from asserting medically inaccurate information that could harm the health [State] residents.
3. False or misleading information about the effects of abortion hinders a resident's ability to make an informed decision and may appropriate medical care when time is an important factor.
4. The American Medical Association (AMA) insists that: "any entity that represents itself as offering health-related services should uphold the standards of truthfulness, transparency, and confidentiality that govern health care professionals." The AMA further urges that: "public funding only support programs that provide complete, non-directive, medically accurate health information to support patients' informed, voluntary decisions."²²⁴
5. The American College of Obstetricians and Gynecologists (ACOG) states that: "People seeking reproductive health care must have access to comprehensive, evidence-based, nonjudgmental health care and information from qualified professionals, regardless of whether they decide to continue a pregnancy or seek abortion care."²²⁵

6. It is unconscionable for the government to use taxpayer funds to support the expression of health care information that is demonstrably false and potentially damaging to clients.

SECTION 3. TRUTH IN REPRODUCTIVE HEALTH CARE

After section XXX, the following new section XXX shall be inserted:

MEDICALLY ACCURATE INFORMATION FROM HEALTH CARE FACILITIES THAT RECEIVE GOVERNMENT FUNDING

(A) No organization shall be eligible for any type of grant or subsidy from the state if, while presenting itself as providing health care services, its staff or volunteers disseminate oral or written information asserting any of the following:

1. That having an abortion raises the risk of developing breast cancer;
2. That having an abortion raises the risk of infertility;
3. That having an abortion raises the risk of negative emotional or mental health problems or increases the risk of suicide ideation;
4. That medication abortion poses greater health risks than other common prescription drugs or than childbirth; or
5. That an abortion procedure poses greater health risks than other common medical procedures or than childbirth.

(B) A facility presents itself as providing health care services if it does any of the following:

1. Advertises itself, including on the Internet or on signage, as if it provides medical services, or uses medical imagery in promotional materials, including but not limited to websites, social media, and printed materials.
2. Is made to look like a medical office with medical examination tables or equipment not generally found in a nonmedical counseling center.
3. Has staff providing medical services or medical counseling who are not licensed medical providers.
4. Claims to comply with the requirements of the Health Insurance Portability and Accountability Act (HIPAA).

5. Claims that clients are able to file complaints against the facility with a particular federal or state health agency, if those agencies do not accept complaints for the type of facility being run.

6. Lists in advertising or on-site a medical director who is not licensed under [cite code] as a physician, [and if appropriate, licensed as a physician assistant or nurse practitioner] or lists a medical director who is licensed but does not directly supervise, in person, the provision of all medical services provided at the facility. [NOTE: Many states have laws or regulations that define “direct supervision.” Ask your in-state advocates and bill drafters to ensure that the legislation uses language that fits your state.]

7. Requires clients to fill out an intake form before receiving services which asks for personal health information, such as a listing of prescriptions the client is taking or a listing of medical conditions that are unrelated to establishing a client’s pregnancy.

SECTION 4. EFFECTIVE DATE

This law shall become effective on July 1, 20XX.

16. Resolution Against Deceptive Practices

Issue Overview

Unregulated Pregnancy Clinics often present themselves as free medical clinics to mislead clients seeking abortion. Their primary goal is to prevent clients, through persuasion, misinformation, or delay, from having an abortion.²²⁶ While these organizations have the right to oppose abortion, most use misleading tactics, including ads, signs, and websites presenting their facilities as conventional medical clinics, even, at times, as abortion providers.^{227,228} Inside, they often resemble medical offices, with waiting rooms and exam rooms outfitted with medical equipment, and staff in lab coats and scrubs. Clients must often fill out intake forms that ask for private health information.²²⁹

Often presenting themselves as unbiased medical providers, most UPCs offer medical or quasi-medical services.²³⁰ Nearly all UPCs offer free pregnancy tests²³¹ readily available at any pharmacy. Between one-quarter²³² and one-half²³³ advertise free STD/STI tests, and approximately three-quarters advertise free ultrasounds,²³⁴ typically performed by someone presenting as a medical professional.

UPCs' use of ultrasound machines is unethical. UPCs do not perform diagnostic ultrasounds that address medical issues. Instead, they offer so-called “limited” or “non-diagnostic” ultrasounds, intended to show pictures of the uterus they hope will dissuade clients from seeking an abortion. This is a misuse of medical equipment;²³⁵ even one of the three major UPC umbrella groups, Care Net, admits as much when it answers, “Can we just do ultrasounds without becoming a medical clinic?” with the answer, “Absolutely not. The use of ultrasound energy in any form is considered the practice of medicine.”²³⁶

Mobile pregnancy centers are intentionally designed to look like conventional medical facilities.²³⁷ As ICU Mobile, “A Ministry Division of Care Net,” concedes: “ICU Mobile units are neutrally branded and medically designed. By having this independent brand, we break down the barriers that may prevent abortion-minded women from coming on board...”²³⁸ Another set of mobile UPC trucks, from Save the Storks, have painted on the sides: “Women’s Choice Center,” “Pregnancy Testing & Ultrasound,” and “mobile medical unit.”²³⁹

UPC clients have reported that they believed they were at an actual medical clinic,^{240,241} **where staff made false claims about reproductive health care under the guise of medical authority.** UPCs often target people who are young, have lower incomes, and may not be familiar with the difference between a traditional clinic and a UPC. These clients are vulnerable; many may be afraid. This vulnerability is exploited when someone who may or may not be an appropriately licensed medical professional makes alarming medical claims

to someone in a state of stress. That's routinely the UPC strategy: use medical impersonation to push falsehoods about the safety of standard reproductive health care.²⁴²

Because the vast majority of UPCs are not medical offices, they can and do violate clients' privacy. Traditional medical clinics must follow the privacy, confidentiality, and records security requirements of the federal Health Insurance Portability and Accountability Act (HIPAA) and/or state laws. UPCs are not subject to HIPAA and are not legally required to protect clients' private health information.²⁴³ On the contrary, many UPCs maintain client records in online databases accessible by third parties outside the UPC.²⁴⁴ Even worse, the national UPC industry employs these records to amass "digital dossiers" on clients, their doctors, and their loved ones that could be used in pregnancy-related prosecutions.²⁴⁵

Our state must regulate UPCs. The American Medical Association "urges the development of effective oversight for entities offering pregnancy-related health services and counseling."²⁴⁶ The American College of Obstetricians and Gynecologists says that policymakers should hold UPCs "accountable for deceptive practices by, for example, enforcing and strengthening consumer protection laws against false and misleading advertising, investigating the pervasiveness and impact of deceptive practices on patients, and partnering across the public and private sectors to ensure transparency."²⁴⁷ They are right.

Resolution Against Deceptive Practices in Reproductive Health

Summary: The Resolution Against Deceptive Practices in Reproductive Health strongly condemns the deceptive practices of Unregulated Pregnancy Clinics operating in [State] call for the protection of clients who visit these UPCs

Based on [NJ AR 68 \(2020\)](#)

SECTION 1. SHORT TITLE

This Act shall be called the “Resolution Against Deceptive Practices in Reproductive Health.”

SECTION 2. RESOLUTION

Whereas, Unregulated Pregnancy Clinics (UPCs) also known as “crisis pregnancy centers,” are a type of nonprofit organization established to counsel clients against having an abortion;

Whereas, many UPCs intentionally advertise as if they were all-options reproductive health clinics in order to entice pregnant clients inside;

Whereas, many UPCs are designed to resemble medical clinics, with waiting rooms, examination rooms, medical equipment, and staff dressed like doctors and nurses, the majority of UPC staff, both employees and volunteers, are not licensed medical professionals;

Whereas, most UPCs do not inform clients that they are not a medical clinic, may not have medical licenses, and may not be supervised by a physician, physician assistant or nurse practitioner;

Whereas, most UPCs purport to offer ultrasound services, and yet these are typically non-diagnostic ultrasounds which are not interpreted by professionals licensed to do so;

Whereas, most UPCs offer ultrasound services primarily as a means to display fetal images with the intent of discouraging clients from seeking abortion care;

Whereas, since UPCs are not traditional medical entities, they are not required to meet the sanitation and safety standards that apply to medical facilities and, in most cases, are not subject to any regulations at all;

Whereas, UPCs often use manipulative and coercive tactics on unsuspecting clients, expressing negative judgment toward clients who are considering abortion, emergency contraception, and even birth control medications and devices;

Whereas, UPCs frequently provide clients with inaccurate information linking abortion to adverse outcomes, as well as misinformation about the effectiveness of condoms, the prevention of sexually transmitted infections, and the stage of a client's pregnancy;

Whereas, when clients receive misinformation, including incorrect due dates that could delay the delivery of prenatal care, it can be dangerous to their health;

Whereas, it is appropriate that this [House] strongly condemn the deceptive practices of Unregulated Pregnancy Clinics in order to protect the health of clients who visit UPCs; now, therefore,

Be It Resolved by the [legislative body]:

1. This House strongly condemns the deceptive practices of Unregulated Pregnancy Clinics and calls for regulation that protects the health of clients who visit these UPCs.
2. Copies of this resolution, as filed with the Secretary of State, shall be transmitted by the Clerk of the General Assembly to the [Governor and the Secretary of Health].

Messaging and Communications

Why Messaging Matters

Messaging is one of the most powerful tools in advocacy and policy-making. A strong message can mobilize voters, influence lawmakers, shape media narratives, and build public will for change. In contrast, a weak or unclear message can lead to confusion, resistance, or inaction.

In today's political climate, where misinformation spreads quickly and attention spans are short, communicating effectively is just as important as having the best policy solutions. When you advocate for your issues, your message must be clear, values-driven, and easy to remember to resonate with your audience.

Who This Chapter is For

This chapter is designed for:

- Policymakers who need to communicate policies in a way that connects with constituents and the media.
- Advocates and organizers who mobilize communities, build coalitions around important issues, and work to persuade constituents and influence public opinion.

Whether you're preparing for a press interview, a town hall, a legislative hearing, or a social media campaign, the strategies in this chapter will help you deliver your message effectively and persuasively.

How to Use This Chapter

This chapter is designed as a practical, step-by-step guide. You'll learn:

- The core principles of effective messaging – What makes a message clear, persuasive, and memorable?
- How to frame a strong message – How to structure your message to resonate with your audience.
- Tailoring your message for different audiences – Voters, legislators, media, donors, and coalition partners.
- Talking points – You'll see values-based lead message points and supporting arguments, stories, and facts that strengthen your core message.

By the end of this chapter, you'll have a ready-to-use messaging framework and talking points that ensure your communications are compelling, consistent, and action-oriented—no matter who your audience is.

Core Principles of Effective Messaging

Messaging is not about what you say but what people hear, remember, and act on. To ensure your message sticks, follow these principles:

1. Clarity – Keep it simple. People remember simple, straightforward messages, not lengthy explanations. Avoid acronyms and insider language.
 - Ineffective (Too Technical)
 - “Unregulated Pregnancy Clinics operate outside of HIPAA protections, which means their data collection and retention policies fail to meet established health privacy standards.”²⁴⁸
 - Effective (Clear and Simple)
 - “If you visit an Unregulated Pregnancy Clinic, your personal health information isn’t protected. They can collect and share your data with anti-abortion groups²⁴⁹—and you’d never know.”
2. Consistency – Stick to the same core message across different platforms, such as speeches, social media, interviews, and legislative testimony.
 - Core Message
 - “Everyone deserves honest, unbiased care. But, UPCs deceive people, collect their personal health information without protection, and push a political agenda rather than offer necessary health care.”
 - Reinforcing the Message Across Channels
 - Press interview: “People seeking care deserve health care, not deception. Many UPCs pretend to offer medical care, but they aren’t regulated and can misuse private health data.”
 - Social media post: “Did you know UPCs collect your personal information and don’t have to protect it? Unlike regulated clinics, they aren’t covered by HIPAA. #PrivacyMatters”
 - Legislative hearing: “This is a simple issue: If a place collects your medical data, it should be held to the same standards as traditional health care providers.”

Use words people use

Repetition strengthens retention

3. Values-Driven – People are persuaded by values first and facts second. Connect to shared values (e.g., honesty, privacy, freedom, fairness, safety) rather than policy details and data.

- Ineffective (Fact-Heavy, No Values)

- “Many Unregulated Pregnancy Clinics don’t employ licensed medical professionals, and 80% of them provide misleading or false information about abortion risks.”²⁵⁰

Relate before you reason

- Effective (Values-Driven First, Facts Second)

- “Women deserve honest, medically accurate health care—not deception. But Unregulated Pregnancy Clinics are lying to pregnant people and putting their health at risk. In fact, 80% of them provide false or misleading information about abortion.”²⁵¹

4. Make It Personal – Statistics support a message, but emotion drives action. Real stories create connection and encourage action with urgency.

- Fact-Only Approach (Less Persuasive)

- “Data show that UPCs are targeting low-income communities, often setting up near reproductive health clinics to deceive people seeking evidence-based services.”^{252,253}

- Storytelling Approach (More Persuasive)

- “When Maria found out she was pregnant, she went to what she thought was a medical clinic. Instead, the staff pressured her, shamed her, and then collected her private information—without telling her they weren’t licensed medical professionals who would respect her right to autonomy in her health care decisions. No one should have to go through that.”

Emotion before explanation

5. Audience-Centered – Different audiences have different priorities (e.g., other lawmakers, constituents, organizational allies, donors, etc.). Tailor your core message to different audiences based on what resonates with them.

- Voters & the Public (Emphasize Privacy & Deception)

- “Unregulated Pregnancy Clinics collect private health data without protection.²⁵⁴ Your personal information could be shared with anti-abortion groups.”

- Lawmakers (Emphasize Consumer Protection & Accountability)

- “If any other business collected private health information under false pretenses, they’d be held accountable. UPCs shouldn’t get a free pass to deceive people.”

- Media & Journalists (Give a Strong Hook & Soundbite)

- “UPCs are a Trojan horse. They often look like traditional all-options clinics, but they exist to mislead and manipulate women out of obtaining abortions, all while collecting their private health information.”^{255,256}

Mirror their mindset

Crafting Your Message

A well-crafted message ensures that every communication stays focused on your core message, with supporting points and a clear call to action. It helps you stay on message, no matter the audience or setting.

Key Components:

1. Core Message ("What") – The most important takeaway in one sentence.
2. Supporting Points ("Why") – Two to three key reasons that reinforce the core message.
3. Call to Action ("How") – A clear, actionable step people can take.

Next, we'll break each section of your message framework down into more detail.

Core Message ("What")

“Unregulated Pregnancy Clinics deceive and endanger pregnant people by collecting their private health information without protection, using misleading medical claims, and operating without medical oversight. It’s time to hold them accountable.”

Why This Works:

- Direct and clear – No jargon or policy-heavy phrasing.
- Values-driven – Emphasizes fairness, honesty, and accountability.
- Creates urgency – Frames UPCs as a threat to people seeking care.

Supporting Points ("Why")

- **UPCs use deceptive practices to mislead and manipulate women.**
 - “No one should be tricked when seeking health care. UPCs lie to women about their options.”

- UPCs often pretend to be medical clinics but are not licensed health care providers.
 - Staff often give false or misleading information to pressure women into continuing pregnancies.
 - They regularly use delays and scare tactics to limit people's options before they can access comprehensive and evidence-based care.
- **UPCs collect personal health data without protections and are not covered by HIPAA.**
 - “Everyone deserves privacy. Your private health data is protected if you visit a regulated medical clinic. If you walk into a UPC, it’s not. And they can share your information with anti-abortion activists without your knowledge.”
 - Unlike traditional clinics, UPCs aren’t bound by HIPAA, meaning they can collect, store, and share client information without consent.²⁵⁷
 - Many UPCs share private health data with anti-abortion groups with a larger agenda.²⁵⁸
 - This puts people at risk, especially in states where abortion is banned.
- **UPCs are unregulated and operate without accountability.**
 - “If a business misled customers and collected private data under false pretenses, they’d be held accountable. UPCs shouldn’t get a free pass to deceive women.”
 - They receive public funding in many states, but there is no oversight for how they use their funds.²⁵⁹
 - Most UPCs don’t employ licensed medical professionals²⁶⁰ – yet they give medical-sounding advice that is often false or misleading.
 - If any other business engaged in this level of deception, it’d be shut down.

Call to Action ("How")

“Women deserve comprehensive health care, not manipulation. Lawmakers must step up and regulate these centers to protect individual privacy and stop the spread of misinformation.”

Why This Message Framework Works

This message framework can be used in speeches, interviews, legislative hearings, advocacy materials, and social media to ensure a consistent, compelling argument for regulating UPCs. It works because it:

- Keeps the focus on a simple, repeatable message.
- Connects to values people care about, including privacy, fairness, and accountability.
- Provides clear supporting points that reinforce the main message.
- Ends with a strong call to action.

Tailoring Messages for Different Audiences

A strong message must be adapted for different audiences. While your core message remains the same, your framing should align with what your audience cares most about.

- Constituents and the Public – Use values and personal stories.
 - “UPCs are collecting private health information without protections.²⁶¹ Your personal information could be shared with anti-abortion groups.”
- Media and Journalists – Give clear, compelling soundbites.
 - “UPCs are a Trojan horse. They pose as clinics to mislead people and steer them away from evidence-based reproductive care, while collecting their private data.”
- Policymakers – Frame the issue as one of public accountability.
 - “If any other business misled customers and collected private data under false pretenses, they’d be shut down. UPCs shouldn’t get a free pass.”
- Coalition partners – Emphasize shared goals.
 - Regulating UPCs is about protecting reproductive freedom, consumer rights, and data privacy. We must work together to hold them accountable.”
- Donors and Funders – Highlight urgency and impact.
 - Without action, more people will fall victim to UPCs’ deceptive practices. Your support will help expose the role UPCs play in the broader anti-abortion infrastructure and protect health care access.”

Checklist for Effective Messaging

- ☒ Is your message clear and simple?

- ☒ Does it connect to values people care about?
- ☒ Is it consistent across platforms?
- ☒ Does it inspire action?

Key Arguments for Regulation of Unregulated Pregnancy Clinics (UPCs)

Values-Based Framework

Everyone deserves access to accurate, compassionate, and confidential health care. But Unregulated Pregnancy Clinics (UPCs), also known as crisis pregnancy centers, offer limited information, counseling, and resources. They may provide basic services like pregnancy tests and limited non-diagnostic ultrasounds, but their advertising often leads people to expect more complete medical care than they deliver. These centers operate with little to no oversight, often receiving public funding while failing to meet basic medical, ethical, or financial standards.

The following section outlines the key arguments for regulating UPCs, along with talking points and sample messages:

Values Messages and Talking Points

1. Exploitation of Personal Data

Values Message: People generally assume their personal information will be kept private when they provide it to their medical provider. If you walk into a UPC, it's not. They can share it with anti-abortion activists, law enforcement, or anyone else they choose.²⁶²

Talking Points:

- Heartbeat International, the largest UPC network, was caught recklessly exposing private health data, sharing full names, due dates, and addresses of pregnant people in an unprotected, publicly accessible video.²⁶³

- Training videos show UPC employees casually scrolling through clients' medical records, demonstrating how easily this private information is accessed and shared.²⁶⁴
- UPCs mislead clients into believing their private information is protected when, in reality, they can share personal data with anyone, including anti-abortion groups and law enforcement.
- In Alabama, a UPC gave a woman's records to the police, including details about her periods and contraceptive use that were used in her pregnancy-related prosecution.²⁶⁵

Sample Messages:

- "Walk into a UPC, and your private health information could end up with anti-abortion extremists or the cops."
- "Regulated clinics protect your data. UPCs can leak your name, period dates, and date of pregnancy to anyone."

2. Misuse of Public Funds and Lack of Financial Accountability

Values Message: Taxpayers deserve transparency and accountability when it comes to how their money is spent. Yet UPCs get public funds with no oversight. We must hold them accountable just like any organization using taxpayer money."

Talking Points:

- In many states, UPCs receive public funding without needing to provide impact assessments or audits.²⁶⁶
- In 2023, Tennessee increased UPC funding from \$3M to \$20M; Texas allocated \$140M in 2023.²⁶⁷
- UPC financial reports often inflate impact and fund marketing and executive salaries rather than services.²⁶⁸

Sample Messages:

- "Taxpayer dollars should fund regulated medical services people need and want, not a \$1.9 billion industry that, overwhelmingly, refuses to provide evidence-based care or meet basic medical standards."
- "Taxpayers deserve to know what UPCs are doing with the tax dollars they receive. If they are providing valuable services, they should be able to prove that."

- “How can we know UPCs are the most efficient and effective way to provide services if we do not accurately know how they spend the money they receive?”
- “The vast majority of UPCs take public money with zero accountability. That’s fraud, not service.

3. Deceptive Medical Practices and Misinformation

Values Message: People deserve medically accurate information to make informed decisions about their health.

Talking Points:

- 91% of UPCs advertise medical services, but few have full-time medical staff.²⁶⁹
- “Abortion pill reversal,” promoted by Heartbeat International,²⁷⁰ a major UPC network, is unproven and condemned by the American College of Obstetricians and Gynecologists (ACOG) as unethical and dangerous.²⁷¹
- Some UPCs perform ultrasounds without proper training, leading to misdiagnoses and delays in care.^{272, 273}

Sample Messages:

- “If a hospital nurse lied to a patient, they could lose their license. But at many UPCs, untrained staff hand out medical advice that can be totally wrong—and there’s no oversight, no consequences.”
- “UPCs mislead people with junk science. That’s not health care.”

4. Lack of Data Privacy and Exploitation of Sensitive Information

Values Message: Everyone deserves the right to privacy, especially when it comes to personal health data.

Talking Points:

- UPCs are not bound by HIPAA, despite hundreds of UPC websites falsely claiming HIPAA compliance²⁷⁴
- They collect sensitive information and may share it with anyone, including anti-abortion groups or law enforcement.
- In Louisiana, a data breach from Heartbeat International, a leading UPC network, exposed visitors’ names, due dates, and medical histories.²⁷⁵

Sample Messages:

- “When you visit a regulated health clinic, your data is protected. At a UPC, it can be shared with anti-abortion groups or even police.”
- “UPCs exploit vulnerable people by pretending to offer confidential care—then hand over their records.

5. Coercion and Withholding of Medical Options

Values Message: Everyone deserves autonomy over their reproductive decisions.

Talking Points:

- UPCs are designed to discourage abortion and provide their reproductive and sexual health services only when they feel it will help them coerce clients away from abortion.
- UPC websites often inflate the rate of miscarriage in early pregnancy and suggest people seeking abortion should wait and come to the UPC for an ultrasound to determine if they will miscarry naturally.²⁷⁶
- UPCs target people who have already decided to have an abortion, delaying care until legal timeframes expire.²⁷⁷

Sample Messages:

- “UPCs don’t offer choices. They run out the clock until your options disappear.”
- “Delaying care is not health care. UPCs frequently use manipulation to deny people their rights.

6. Absence of Medical Services and Referrals

Values Message: People should be able to rely on providers for unbiased medical care and support.

Talking Points:

- A study of 607 UPCs in nine states showed:
 - Almost two-thirds made false and biased claims about evidence-based reproductive health care.
 - 95% did not offer prenatal care, and more than half didn’t even refer for prenatal care.
 - 28% provided STI tests, but most did not provide treatment or referrals for care.²⁷⁸

Sample Messages:

- “A ‘clinic’ that doesn’t refer you for the care you need isn’t a clinic, it’s a trap.”
- “When publicly funded UPCs refuse to provide complete pregnancy care, it’s time to redirect those funds.”

7. Targeting of Marginalized Communities

Values Message: Everyone deserves health care that is accessible, equitable, and free from manipulation.

Talking Points:

- There are more than 2,600 UPCs in the U.S.,²⁷⁹ outnumbering abortion clinics 3-to-1, numbers that were the reverse 30 years ago.²⁸⁰
- They advertise using abortion-related keywords to divert people searching for care.²⁸¹
- UPCs are often located in low-income areas and communities of color, where residents already face barriers to evidence-based reproductive health services.^{282,283}

Sample Messages:

- “UPCs routinely prey on people with the fewest options and the greatest needs.”
- “Health care equity means ending deceptive practices that target the most vulnerable.”

8. Political Influence and Anti-Choice Agenda

Values Message: Public health should put patients before politics. Our laws must protect individuals’ privacy and ensure health policies reflect that priority.

Talking Points:

- UPCs are active players in anti-abortion policy-making and legal efforts.²⁸⁴
- They mobilize voters and lobby lawmakers.²⁸⁵
- Their leaders train affiliates to influence litigation and promote abortion bans.²⁸⁶

Sample Messages:

- “UPCs aren’t health care; they’re the boots on the ground for the anti-choice movement.”
- “This industry is more focused on banning abortion than helping pregnant people.”

“Everyone deserves honest, safe, and supportive health care. It's time to hold UPCs accountable, protect people’s privacy, and ensure public dollars go to health care providers that meet communities’ needs.”

Public Opinion Polling

UPCs are harming people all over the country. They are a little-known threat to voters, but voters reject them when they hear a little about these centers. Most voters in states want to see these unlicensed centers held accountable at all times, even before messaging. That support skyrockets when voters learn of their nefarious nature, especially their lack of health and safety standards. It stands strong even in the face of positive information about these centers.

Regulating UPCs is not a partisan matter: red state to blue state, conservative to liberal, voters are concerned about UPCs – and polling shows that voters would be more likely to re-elect lawmakers who took action against them.

This is an opportunity for policymakers to pass good policy and gain positive will among voters on both sides of the ideological aisle. Voters are more likely to consider officials trustworthy, caring about people like them, and acting in the public’s best interest if they take action on UPCs.²⁸⁷

Additional Resources

This section provides direct access to issue experts and additional resources to help policymakers, advocates, and coalition partners advance the policy solutions outlined in this playbook. Inclusion in the additional resources listing does not imply that any individual or entity endorses all the policies in this playbook.

MEDICAL STANDARDS

Issue experts

John Ayres, PhD, MA Vice Chief of Innovation and Associate Professor, Division of Infectious Disease and Global Public Health, University of California San Diego ayers.john.w@gmail.com	Public health researcher; co-led the first national study analyzing the services and operations of crisis pregnancy centers across all 50 states to document the services advertised. Co-creator of ChoiceWatch.org .
Mitchell Creinin, MD Distinguished Professor, Department of Obstetrics & Gynecology, University of California Davis Health mdcreinin@health.ucdavis.edu	Leading researcher and professor; worked on the only controlled clinical study on “abortion pill reversal” promoted by UPCs. Featured commentator in the UPC documentary, <i>Preconceived</i> , which focused on UPCs' medical and ethical practices.
Maria Gallo, PhD Professor and Chair of the Department of Epidemiology, Gillings School of Global Public Health, UNC Chapel Hill mfgallo@unc.edu	Expert on the provision of abortion and comprehensive pregnancy care in states with abortion bans and contrasts evidence-based services with limited care at UPCs. Member of the Alabama Maternal Health Task Force.
Robin Marty Executive Director, WAWC Healthcare (formerly West Alabama Women's Center) robin@walwc.com	Clinical director, author, freelance writer, and speaker; expert on the provision of abortion and comprehensive pregnancy care in states with abortion bans and contrasts evidence-based services with limited care at UPCs.

Roxanne McNellis (Sutocky) Director of Public Affairs, The Womens Centers rsutocky@thewomenscenters.com	Public affairs and communications expert for a multistate medical practice targeted by extremist UPC tactics. Specializes in community engagement, story collection, and strategies to counter anti-abortion extremism at state and local levels.
Lisa Perriera, MD, MPH Chief Medical Director, The Womens Centers Professor of Obstetrics and Gynecology, Thomas Jefferson University Board Member, The Women's Law Project lperriera@thewomenscenters.com	Practicing OB-GYN and advocate with direct experience caring for patients who have encountered UPCs; leader of a multistate medical practice targeted by extremist UPC tactics and active supporter of state-level strategies to reduce the harms they cause.
Andrea Swartzendurber, PhD, MPH Associate Professor, Epidemiology and Biostatistics Department, University of Georgia College of Public Health aswartz@uga.edu	Public health researcher; co-developer and lead of CPC Map, an interactive geolocated national directory of CPCs operating in the US and the most scientifically-rigorous, comprehensive, and up-to-date directory of CPCs; has authored more CPC publications than any other scientist.

Unregulated Pregnancy Centers: A Policy Playbook

The Public Leadership Institute developed this playbook to serve as a practical resource for policymakers, advocates, and community leaders seeking to hold unregulated pregnancy clinics (UPCs)—also known as crisis pregnancy centers—accountable. These facilities often present themselves as legitimate providers of reproductive health care while operating without basic medical standards and oversight, a lack of financial transparency and accountability, inadequate protections for private information, and deceptive practices intended to discourage people from seeking abortion care.

Drawing on expert legal and policy analysis, real-world case studies, and input from advocates and experts, this playbook equips you with the tools needed to regulate UPCs. Inside, you'll find model legislation, strategic messaging, and policy guidance that you can adapt to different political and legal contexts. Whether you are advancing oversight for the first time or reinforcing existing protections, we designed this playbook to support your efforts at every stage—from drafting legislation to building public support.

The fight for high-quality reproductive and public health requires courage and a clear understanding of the systems that threaten it. We hope this playbook helps you act boldly and effectively to protect your community from harm and uphold dignity, autonomy, and transparency in health care.
